

Jidhnyasa Kulkarni

MCA

Company:Oracle Financial Services Software

Job Profile:Associate Consultant

Offer Type: [Placement Only]

CTC:9.82

Location:Mumbai, Pune Bangalore

Process Date: 8 October 2025

Placement Process:

- 1) Online Assessment Round: (36 Questions 120 minutes)
- 2) Technical Interview I
- 3) Technical Interview II
- 4) HR round

1. **[Technical Round 1]:**

So first of all, it started with the introduction. Then he asked me about my project. On the project, he asked me how I managed role-based authentication. Then he asked me to draw a simple architecture showing the flow of the system frontend and backend when we are verifying the landlord. He also asked me why I used MongoDB instead of MySQL. I explained it .

He asked me how I connected to JDBC, where I went blank, but the interviewer was very nice. He said we could come back to that question later. Then we moved to Java.

In Java, he asked me what features were introduced in Java 8. I answered that Lambda functions and Streams were introduced. Then he asked if I knew what the String Constant Pool is, which I explained but not very clearly. After that, he asked me the difference between == and .equals(), which I explained properly.

He then wrote one code on the same topic (== and .equals()) and asked me to guess the output. I guessed it correctly. He also asked me how strings are stored in Java and what are the different ways of declaring strings.

He asked me one question on JVM architecture — something about how many memory areas are there. I don't remember the exact question, but I explained the entire JVM working in detail.

Then he asked me a few coding questions:

1. [Find the second largest element in an array](#)
2. [Find duplicate elements in an array](#)
3. [Check whether a string is a palindrome](#)

After that, he asked if I knew SQL. Then he asked me to write a few queries:

1. [Find the 2nd maximum salary from a table](#)
2. [Find duplicate names in a table](#)

In the end, he asked me if I had any questions. I asked, “Now that Oracle is transforming into Oracle Cloud, how is it being implemented in the banking sector?”

2. [Technical Round 2] :

So Round 2 started with a brief introduction. Then, on my resume, I had mentioned “skilled in writing normalized SQL queries,” so he asked me questions on it — what is normalization, the need for it, why I used it, and how I implemented it. He also asked, “What if you haven’t used it?”

After that, he asked about partitioning in SQL. I didn’t know it well, but I still explained paging and gave a detailed explanation. Then I explained indexing — he was impressed by the explanation I gave for indexing, as I explained the entire process in detail.

Then we moved on to SQL query questions. He asked me to find the second largest salary (which was also asked in Round 1). Then he asked: if I have table A and I want to copy all the data from table A to table B, but the condition is that I can’t use **INSERT**, I was told to use **SELECT**.

Another follow-up question was: what if I don’t want the data, I just want the columns?

Then he asked me if I knew **DDL, DML, and DCL**, which I explained properly. He also asked me: if I want to display **NULL** values in the table as something else instead of **NULL** suppose I have to display “test” which function do we use for that? I explained that **NVL** can be used for that.

Make sure to know every single word you have written on your resume, as they can ask you anything mentioned there.

3. [HR Round]: The HR round lasted for about 10–15 minutes, where the HR asked general questions like how my day was and whether this was my first interview. She also asked if I was willing to relocate. Then she asked if, apart from academics, I have any other hobbies, and finally, if I am okay with the compensation.

Useful Tips:

- The most important thing is to stay confident while answering questions. If you are explaining any concept, explain it thoroughly.
- Make sure to stay calm before going to the interview and during it. Even if you get stuck somewhere or go blank, pause, think of a solution first, decide what you want to say, and then answer confidently.
- Know your projects in depth. Be well-prepared with general questions such as:
What issues did you face?
What solutions did you think of?
Why was your chosen solution better?
- Always keep a positive attitude — tell yourself that *you are going to be placed today*. Trust me, it helps a lot! It keeps your mind calm and makes you appear more confident.
- Always show eagerness to learn and that you are open to new things.
- Show that you are well-researched about the company read about what the company is currently working on.
- Ask questions after the interview. It shows that you genuinely know about the company and are truly interested.
- Make sure to go through all the previous Questions asked in the past interviews.
