

Company:- Baker Hughes (BKR)

Job Profile:- Digital Technology Intern (DTI)

Offer Type:- Internship + Placement (Performance Based)

Internship Stipend:- Rs 40,000/-

CTC:- Rs.11,00,000 per annum

Location:- Mumbai (Offices at Powai and Airoli)

Process Date:

Applications:- 5th to 9th August 2025

PPT + OA:- 11th August 2025

Digital Interview:- 12th August 2025

On-campus Interviews:- 14th August 2025

Eligibility:-

- **CGPA:- 6.5**
- **No Backlogs**

Placement Process:-

1. OA (165 Per Seating arrangement) (11th August from college post PPT):-

Platform:- Microsoft Forms (Proctored) (Do not try to cheat the invigilation was pretty strict).

Questions:- 30 (MCQs)

Time:- 30 mins

Note:- There was no auto submit, so make sure to click the submit button before the time ends.
Only then your submission will be recorded.

The MCQ's were based on Java/ Python/ C/ C++/ OS/ CCN /guess-output and few general Aptitude questions asked although few participants had questions pertaining DBMS, LLMs, API's etc too, the questions were of moderate difficulty thus doable but do not get stuck on a question, time management is key.

A general tip is **read the test instructions well enough.**

Keep your basics crystal clear.

Be efficient at Time management.

Be calm and keep your momentum throughout the day, for me the day of this test was very hectic for some like me as we had interviews for Wissen in the morning (at their office at around 9) followed by PPT and OA for IDfy and finally ending with PPT and OA of Baker Hughes. If at any point you lose your momentum things can go into a spiral. Keep yourself motivated the placement process can be hectic a times even frustrating but it's up to you to keep yourself going.

2. Digital Interview [45 students appeared] (on the 12th August till 3:30pm):-

Platform:- HireVue

Type of Questions:- Typical HR and behavioral questions.

Time per question:- Max 3 mins per question. You can stop the recording once done.

Preparation time:- 30 seconds before the 3 mins start.

Note:-

There is no button to pause/retry the recording, you have 3 mins to record the answer and a single attempt. You go to the next question after you answer and voluntarily proceed or timer times out.

There were a few trials available before starting to answer any of the actual question.

Questions that were asked:

1. Why did you choose your current degree program?
2. What do you aim to gain from this internship?
3. Tell us about a challenging project experience.
4. How did you manage multiple priorities and time?
5. Tell us about a time when you realized you have a weakness and how did you try to overcome that?
6. What would you like us to know more about you?

These questions were the same for everyone.

Some tips for this round:

1. Please focus on speaking and articulating your thoughts well. Structure your well answer in the given 30 seconds.
2. Do not read any scripts, or use GPT in any form for making these answers, because that will definitely look unnatural if you read onto the camera, it can easily be captured.
3. They do observe the body language and eye contact with the camera so try to maintain a good posture, hand movements and good eye contact with the camera. Keep a decent smile (do not overdo) on your face while speaking the answers.
4. Visualize as if you are speaking to a real person, if it helps.
5. ***Most importantly be confident about what you are speaking, be clear on what you wish to convey, be natural and have a positive outlook do not prolong any answer unnecessarily.***

3. Technical Interview [35 students appeared] (on the 14th of August in college):-

We were called at 9:30 am in the morning. The TPCs collected all our resumes before the Interviews began and handed each interview panelist a copy before beginning.

I was the 1st person for my panel; the interview began with me exchanging warm greetings with the 2 panelists. They asked me to introduce myself while they glanced at my resume. They picked up my interest for cyber security from my introduction and in continuation to it asked about my cyber security project on my resume. They asked me to explain them like they had little to no knowledge of cyber security. I explained them keeping their request in mind (I was used to interviewers with no idea asking

me to explain it) but then the tables turned one of them started going into depth of it and asked about why I choose it and not something different (at this point it dawned on me that this panel is well versed in cyber security) we discussed on these lines for about ~40 minutes. After this they asked me a few HR questions like did I attend the ppt to which I told them the truth that I wasn't as I was late and the room was full, they asked me the 4 pillars of Baker Hughes to which I answered 2 and tried to think but later confessed on not remembering them. They seemed satisfied and said I could leave. At this juncture I asked the panelist if he was working in cyber security as no interviewer up to now had an idea of what I was speaking to which the grim on his face broadened and answered affirmatively then I proceeded to ask him how seriously does Baker Hughes take cyber security after which I asked their permission to leave.

4. Techo-HR Interview [15 students appeared] (on the 14th of August in college):-

After around 20 mins of finishing my 1st round, I was called for my 2nd round.

The TPC's did the same drill collecting a resume copy and handing it to the 2nd panel, this panel too had 2 panelists. The questions in this round were more HR with typical questions like:-

1. How was your day?
2. If I walk into a class and ask your friends, what will they say about you?
3. What is the thing(s) that all your friends do dislike about you?
4. Then how did you handle conflict in a group?
5. One thing that you had to do because none of your teammates were willing to do?

And so on. Overall it was a 40-45 min endeavor.

Finally, 9 Students were offered the job me being one of them.

Useful Tips:

1. **Know your Resume INSIDE OUT:-** Make sure you have at least some ideas about each and every word written on your resume. Please do not write anything that you have no idea about, it will create a very bad impression
2. **DSA and Fundamental concepts are Important:-** It is always good to be prepared about anything and everything. My personal recommendation is that when there is time do problems from both Leetcode as well as from CodeForces as it will help you in coming up and implementing of solutions. Also keep your knowledge of fundamental subjects clear.
3. **Practice Aptitude:-** Use IndiaBix for aptitude.
4. **Build Projects that have some value:-** Do not build generic projects, try to see what real-world problems can you solve and try to solve that in your projects. It may not be perfect, but is still way better than something too generic. Also try to keep a solid reason ready on why you chose a particular xyz technology over something else.
5. **Have a general idea of all projects and your role etc. But practice one project in deep and use it everywhere for questioning and cross questioning.**
6. **Consistency and Discipline are of paramount importance:-** Whatever you do, stay consistent with it. I remember, when starting out, I used to get anxious when I couldn't solve a problem, but with time and effort, I did manage to solve those.

7. **Communication is unparallelly important!**
8. **There will be times when things will just not work out.**
9. **Use an ATS Friendly Overleaf Resume Template.**
10. **Lastly, do not lose hope if you are not selected, keep on trying.**

Get used to rejections. Do not give up.

During the entire placement season keep your health up and your overall attitude positive, had severe side effects that caused excruciating joint pains, and still had to travel 1 hour daily for online assessments and interviews. I faced rejections in interviews from Nomura, and in the HR round of ISS, during Wissen's 2nd round.

Stay connected to your friends.

They can help more than you can imagine, they conduct mock interviews, help build projects together, prepare in groups. It really helps in keeping the momentum and staying motivated.

HR Interview Tips:

1. Maintain Eye Contact

Ensure steady, natural eye contact with the interviewer. It shows confidence and helps build a connection, but avoid staring as it may come across as forced.

2. Be Mindful of What You Share

Avoid oversharing personal experiences that do not directly address the question. Focus on relevant, concise answers that highlight your suitability for the role.

3. Use the STAR Method

Structure your answers to behavioral questions using the STAR method (Situation, Task, Action, Result). It provides clarity and demonstrates a problem-solving mindset.

4. Show Respect in All Responses

Be polite and professional. Even casual or off-topic comments should be delivered respectfully to avoid unintentionally offending the interviewer.

5. Frame Strengths and Weaknesses as Narratives

Share your strengths and weaknesses with context. Use short stories or examples (real or carefully crafted) that showcase growth and self-awareness.

6. Avoid Monologues

Do not treat your answers like speeches. Keep the conversation balanced, concise, and interactive. Know when to stop and where to elaborate.

7. Display Confidence and Personality

Strong communication and soft skills often outweigh technical skills in HR rounds. Let your personality come through—be confident, composed, and clear.

8. Always be Positive

Always answer all questions in a positive manner and I will suggest do not ask for feedback in an HR interview, you can in a technical round if you feel that you have done great.

9. Always Deny plans for Higher Studies

Never show interest or accidentally hint your passion for academia and research. Prepare solid reasons to justify why you are choosing industry over academia, or it may become your reason for rejection.

**Just work hard and you will succeed eventually, it is never over until you give up.
Rome wasn't built in a day, it was built gradually so will your career for the day you give up on
yourself is the day you lose.**

**Keep your outlook positive and have faith there is some opportunity kept explicitly for you and
when it comes it will come served on a silver platter for you.**

ALL THE BEST!!!
