

Company:Barclays

Job Profile:SDE

Offer Type: Placement Only

CTC:13.5 LPA

Location:Pune

Process Date:OA (26-7-25)

PPT & Interview Rounds (29-7-25)

Placement Process:

The process had 3 rounds.First round OA,then the shortlisted candidates from the OA round had to attend the PPT ,followed by 2 interview rounds and one prank round 3 days after the OA round. Clearing OA is very tough as major filtering happens in this round. So being well versed with various aptitude, CS fundamentals' mcqs and coding questions is really important.Hence start practising for the same from the beginning.

1. **Online Assessment Round** [133 candidates appeared for this round]

This round was conducted in college on the Hackerearth platform. It had multiple mcqs based on java fundamentals mostly OOPS and some code snippets from which we had to guess the output.The mcqs were quite tricky.There was 1 coding question exactly same as this:

<https://leetcode.com/problems/lexicographically-smallest-generated-string/description/?envType=problem-list-v2&envId=string>

And there one an easy SQL query,where we were to find the name of candidates who had made purchases in the month of October.I used MONTH() to solve it.

2. **Technical Round** [37 candidates appeared for this round]

Before this round there was PPT where we were told about company's values(RISES) and its work culture. It is very important to be attentive during the PPT as it helps a lot while answering in the interview rounds. So my Technical round was mostly theoretical ,testing my understanding of each and every concept. It lasted for about 45 minutes.Firstly I was asked to give my introduction, which should be given very thoughtfully as everything from there is based on what you have said.After that I was asked about the projects so I gave a brief about all the 4 projects I had mentioned and then he specifically asked me to explain the 4th project which was the major project.Know your projects inside out.After that he gave me an SQL query to write which was something like there are 2 tables department and employee and I had to find the names of departments where number of employees were more than 10.From this i said multiple words like joins, group by and all so he started asking what did each of them do and how will i use what kind of join in various cases.Satisfied from my answers he asked me the next question,which was based on OOPS design.Given a colony of ants,some ants were soldiers,some were workers and there was one queen ant.Workers could act as soldiers during dangerous times.I had to represent this in class diagrams. It is very important that you keep talking to the

interviewer while solving such things as they want to know how you are thinking. Then he asked me where would certain functions lie ,in which class so like walk is general so it will lie in the main ant class then i was asked, how will you make sure that there is only 1 queen ant to which i answered using singleton class. Then I was asked how to empty an input field in react, where does js gets loaded browser side or server side and then I was asked the difference between C++ and Java then he gave me a scenario where i had to design windows 12 how would i do it with these 2 languages. Then I was asked basics about mongoDB and MySQLI wasn't asked any DSA question but many of my friends were asked DSA so be prepared for it. The interview ended with me asking him a few questions. Do learn LLD concepts as they were very important this year.

3. **HR Round** [21 candidates appeared for this round]

This was a pure HR round for me but some others had a mix of technical + HR. So the Round started with where do I live ,then since the interviewer was an alumni of SPIT he told me how he used to travel to college. Then I was asked about my Minors degree from SPJIMR, what did i learn there and why i chose it. After that he told me to explain situations where I had used the RISES. This went well for about 15-20 minutes and then it was some general talk ,me asking him a few questions and telling him why i chose computer science as a career, telling my weaknesses. It is very important to speak confidently in this round as you are mostly judged on your speaking skills and what type of answers you give.

After this there was a prank round where 16 candidates were called and finally we were told that we have been selected for the program.

Useful Tips:

For DSA use the Striver's A-Z DSA sheet:

<https://takeuforward.org/strivers-a2z-dsa-course/strivers-a2z-dsa-course-sheet-2/>

Practice SQL 50 from Leetcode almost 2-3 times before the placement process starts

For Java OOPS refer to OOPS by Kunal Kushwaha:

https://www.youtube.com/playlist?list=PL9gnSGHSqcn01G3XjUbWzXHL8_EttOuKk

For CPP Fundamentals I referred to :

<https://www.youtube.com/playlist?list=PLLYz8uHU480j37APNXBdPz7YzAi4XIQUF>

For React use the interviewbit's interview questions

Practice various kinds of MCQs again and again to get a strong grip on them Use IndiaBix for aptitude and gfg for cs based.
