

Tejas Billava

Comps

Company: Barclays

Job Profile: Technology Developer Graduate

Offer Type: Placement Only

Internship Stipend: NA

CTC: 13.5 LPA

Location: Pune

Process Date: 26th July (OA) and 29th July (PPT+Interviews)

Placement Process:

There were a total of 3 rounds: OA, TECHNICAL, HR

1. **[OA]** [135 candidates appeared, 37 shortlisted]]

Initial Eligibility criteria required a CGPA of 7+ , then they did some shortlisting and 7.5+ students were allowed to give OA.

OA consist of :

Section 1: CS fundamentals mcq (mainly on java,OOPS,DBMS,SQL) .In java output based question were there for java and oops focus on syntax based question,exception handling and tricky inheritance based question and access modifiers.

Section 2: Dsa question: DSA question (Hard) : [String Generation](#) . same question for 4 times dont skip these question.

Section 3: SQL query easy : query was to extract month from purchase_date column and order by on customer_id column

2. **[Technical Round]** [37 candidates appeared]

After ppt , I proceeded to the technical round. Several panels were interviewing in parallel; I was second in my panel. The interviewer began with ice-breaker questions—where I live and how long it takes me to reach college—then asked me to introduce myself, emphasizing the project I had completed. after that he started with technical questions He started by asking, “What is method overloading and why is it used?” I explained the concept with an example. Next, he asked about method overriding he told me to write both code in paper ,then he asked me to explain why self join is used ,i started explaining with an example but he was not satisfied and he told me in this case we can use group by too, then i started thinking about more examples and use of self join actually i got blank for few minutes (this can happen to anyone—just remember to snap out of it quickly and refocus on the question at hand) then i try to give more explanation on why it might be used but i think he seems less satisfied and and told lets move on to next question after that he gave me 3 tables(party, accounts,transaction) and told me to find out to find all of my party-related transactions in the current year. something like that it was confusing at first i would suggest to ask more clarifying questions, i asked what is common attributes between every col , then he told to write down the query i used this YEAR(CURRDATE()) to extract current year and join all three col on common attributes ,he seems satisfied and then he started asking about DBMS related question he asked me about indexing what is need of indexing ,what is clustering indexing, after that he asked very basic dsa theory question on what is Binary search and how will u implement, then he also asked whether I had experience with Linux commands, I was not confident in it so i told i am not aware about it then and he remarked that such basics are important to know. Finally, he asked if I had any questions. I inquired about the projects he had worked on and whether he had learned the required skills beforehand or on the job, and I asked about the prerequisites for joining Barclays.Prepare two or three thoughtful questions to ask at the end of the interview.

3. **[HR]** [[21 candidates appeared for this round]

This was a pure HR round for me but some others had a mix of technical + HR. I was asked to introduce myself and then he asked me about one of my projects. Then he asked he what are important things to keep in mind while working in team, i gave 4 5 points aligned with RISES value of barclays .He told me to what else so i started adding more then i asked for time to think ,this went for like more like half of the time of interview then he started asking situation question tell me situation u faced challenge and how i overcame it,situation u made mistake and situation u created positive impact on someone,a time where u challenged yourself and then finally, he asked if I had any questions. I inquired about Barclays’ culture and the facilities offered.
