Offer Type: **Internship Only**

Internship Stipend: **75000/month**

CTC: -

Location: **Pune**, Maharashtra, India

Process Date: **12/09/2024**

Placement Process:

1. Technical Round

- For this round, I would recommend refreshing all the CS core subjects you have studied in earlier sems. Most common questions were regarding OOPs, DBMS, DS, CCN, etc. Regarding the interview itself, first the interviewer will ask you to introduce yourself. Its crucial to prepare a good introduction for yourself and to present it confidently. Ideally, it would include your academic background, achievements, and something personal like your hobbies. They might ask a few questions about your hobbies, so be prepared to answer the same.
- Next, they might ask you about the CS fundamentals in different subjects. You need to answer these confidently, and seek no validation from the interviewer. My interviewer gave no reaction at all beyond a 'yes' or an 'okay' to all my answers, which slightly threw me off. I later found out that this is just something they do to test the confidence of the candidates, so do not panic if your interviewer does the same.
- You might also be asked some questions pertaining to your particular skill set. Since I had mentioned my Competitive Programming profiles on my resume, my interviewer asked me about my favourite problem that I had solved.
- Next, I was asked to explain some of the projects on my resume. Make sure to review all your projects before going, as they do ask some very intricate questions regarding those. Try to convey as much information as possible in your answers, and for the umpteenth time, be confident. Depending on how specialized your project is, the interviewer may not know about the technologies in detail, so you can get away with making some statements that are not entirely true, if you are confident enough.

2. Techno-HR Round (15 candidates appeared for this round)

- This round was purely HR for some, and was a mix of techno-HR for others. The technical questions were not too different from what were asked in the first round, but some of the HR questions were very tricky.
- In my case, no matter how I answered, the interviewer seemed to dislike my answer, and would try to debate with me about it. You don't have to agree with the interviewer on every single point they raise, but be polite if you want to express that you disagree.
- If you did well on the technical questions in the round, you should mostly be fine even if the HR section was not that great.
