

Company: **Barclays**

Job Profile: **Summer Intern 2025**

Offer Type: **Internship Only**

Internship Stipend: **75000/month CTC:**

Location: **Pune, Maharashtra**

Process Date: **12/09/2024**

Placement Process:

1. **Online Assessment** (Out of all who appeared, 27 were selected for next round)

This was an online test conducted at college consisting of 14 questions. Among these, one was a coding question that carried maximum weightage, one was an SQL and rest 13 focused on CS fundamentals with a significant emphasis on DBMS and OOPS.

To prepare for this round, I thoroughly revised the concepts of OOPS, DBMS, CN, OS and DSA. I practiced DSA problems on LEETCODE , CODEFORCES and also had participated in many contests.

One tip to ace this round will be to see constraints because our DSA question had $n \leq 10^3$ which I Did by brute force (n^2).

2. **Technical Interview** (Out of 27 students who appeared, 15 were selected for next round)

This round lasted for about 25-30 minutes. The process began with the interviewer asking me to introduce myself, followed by a few questions related to my resume. In introduction only I helped myself by saying my favourite subject is DSA and then the interviewer asked me some basic DSA question like (swapping 2 number without extra variable, pattern print, linked list, etc) . Afterwards he shifted towards project asked about backend part which I was prepared then he went to grill me on DBMS and asked about why Normalisation is necessary , asked some SQL queries (I will suggest you to do 50 sql questions on

Leetcode) .

To clear this round, it's important to be thoroughly prepared with your resume and solid in your understanding of computer science fundamentals.

2. **HR** [Out of 15 students who appeared, 13 were selected]

The interview started with the typical question: *"Introduce yourself."* After that, I was asked a series of behavioral and personal questions, including:

- *Why Barclays?*
- *What was the reason behind every project you built?*
- *What is your favourite subject and most hated subject?*

Overall the HR interview was chill, it mostly tries to find if you are a good person and can fit in their company .

[13 students were offered the internship]

Useful Tips:

Be thorough with your resume. If you've mentioned something, ensure you can provide detailed answers if asked about it. Self-assess by asking yourself, “If I am asked this, will I be able to answer?”]

Have in-depth knowledge of core subjects like DBMS, OOPS, OS, and Computer Networks (CN). Utilize various online resources such as JAVATPOINT and GEEKSFORGEEKS.

Practice problems on platforms CODEFORCES, LEETCODE and also try to give time to questions . I never used to see solution until I have no approaches but still sometimes I Used to give 1 -2 day for a problem .

The tip which was given by our recruiters at end was very crucial they said “ Students should not focus on more fancy things like GENAI etc, focus on basics, core subjects no student had any project solely based on core subjects) .

I will say if you say you are proficient in C++ or java have at least project in that language.
