

[Aashay Sumit Ranjit]

[CSE-AIML]

Company: BlackRock

Job Profile: Software Engineering Intern

Offer Type: [Internship + Placement(subject to performance based conversion)]

Internship Stipend: 50000/month

CTC: 18LPA

Location:Mumbai/Gurgaon

Process Date: 20/8/2025

Placement Process:

OA on 22/8/2025

Interviews 2 rounds on 28/8/2025

The pointer requirement for applying was 7.5cgpa and above luckily I had just reached to 7.64 in sem 6 but I would recommend keep a steady pointer above 8 if possible to not miss any company or at least above 7.5(even before sem 5 as that's considered when placement initially starts) and don't make the same mistake as me, the role options were software engineer, global marketing, aladdin data and open for all(which I went with) after resume shortlisting 100 participants from our college were selected for the OA

1. **[Round 1 OA]** [100 participants from our college]

There were 3 section calculators not allowed(always carry them with you though never know when they might be allowed) All MCQs allotted time was 2 hours but I didn't see any overarching timers.

Technical 20 minutes (10 questions) - Coding questions mostly based on trees like find the position, prefix, postfix , what will be the output pretty easy you could do good with only in class knowledge.

SQL 20 minutes (10 questions) - Most were find the correct syntax, command as well as some theory based questions you should be ok if you practice a bit on geeksforgeeks

Aptitude I don't remember the exact time it was split in 4 sections like(6+8+11+9) mins or something like that 2 sections were like in you're average aptitude maths and logic I think, the other 2 I remember better cause they were unique

flowchart section - 2 flowcharts with blanks and 4 questions each to fill them they might look challenging especially given the time crunch but the first one had branches (switch case) so essentially you just had to compare the options for the blank cell with that spot on the other branches the second one had shorter variable names so it was much harder.

Reading section - I don't know what else to call it but essentially there was a table with construction material names and serial numbers, all questions were on matching them.

You can practice aptitude on geeks for geeks but I didn't find any questions like these 2 sections during my practice.

2. **[Round 2 Interview 1]** [35 candidates shortlisted]

The interview was held on webex in the TPO office itself. I was in the first morning slot so I consider myself lucky. I got a call from them and they told me they'll call again at time of joining and be ready. I entered the allotted room and set up my laptop and opened webex and checked my cam and mic, I also practised my intro out loud which I would recommend to you too if you have the time cause in the previous interviews I'd end up speaking in a low voice without noticing. I got the call and the interview started there were 2 interviewers my introduction went smoothly and they asked me about my projects, I had three projects all of which were all group projects, I went through them briefly after which they asked more in depth about each like my contribution in them, why python? Why [next.js](#) and not node.js? Is [next.js](#) worth upgrading to if you know react? Who made react? I had actually forgotten that one I said "I know a famous company made it but I forgot" even with this mistake the interview went pretty well like a normal conversation maybe because the interviewers chill and I was less tense. There was one question about if my website suddenly had a lot of traffic how would I handle it. Finally they asked me if I had any questions for them and I asked about their experience in the company.

3. **[Round 3 Interview 2]** [16 candidates]

Just as I stepped out of the room I got a call to join my second round of interview I rushed back and set up my laptop and joined the meet this time there was only one interviewer he also asked about my projects but mostly focused on one, what do you mean by scalable? How is your project scalable? How is it Accessible? Why do you call it easy to use? All these are the points I wrote about the project in my resume so only write the truth. I was able to explain all of his questions then he asked me to share my screen and open notepad and write a basic SQL code for inputting data from a source as I was typing there was a connection issue I switched to my hotspot and reconnected and explained what happened (Its possible unexpected things happen during an interview its important to keep calm and not panic) then he told me to stop typing and just explain there were follow up questions like what to do if there is no primarykey? How to choose if the data is coming form multiple sources? Finally they asked me if I had any questions for them and I asked about their experience in the company.(yes I asked the same question I didn't have a better one)

During the online interviews of blackrock sadly a few of our students had used ai it seems and even the company was angry so that day It was doubtful if anyone was going to be selected.

4. **[Round 4 HR(not really)]** [12 candidates]

12 of us were called by the TPO the next day through DMs we were told it's HR we were called one by one and had an interview with Vinod Sikka sir he asked me about how the interviews went and what could be done so the cheating incident doesn't get repeated. Then we all waited in the conference room and Sikka sir said the list had already been given to the college by the company of those who are selected and took the names one by one. I was overjoyed when I heard my name.

[10 were selected 2 waitlisted]

Useful Tips:

Always be truthful both on your resume and in the interview.

On your resume I'd recommend to have at least one group project as it shows capacity to work in a team as well as at least one individual project as it will highlight your personal ability.

If you don't know something it's ok to accept but try to say something else about it you know as well.

It's possible unexpected things happen during an interview it's important to keep calm and not panic

Luck is always a factor but that just means you have to keep trying don't give up.

Do practice interviews preferably with someone like a friend.

Don't panic during interviews at worst you'll not get selected but if you panic you're definitely not getting selected.

Please don't cheat in any of the placement process you'll cause harm not only to yourself but to your peers and juniors as well.

Well if you have any questions
