Comps

Company:Equity Data Science

Job Profile: SDE

Offer Type: Internship + Placement

Internship Stipend: 50k

CTC: 15 LPA

Location: Mumbai

Process Date: OA-15/7/2025

Interview-16/7/2025

Round 1 – Online Assessment

(A total of **143 students** were shortlisted for this round based on a **minimum eligibility criteria of 7.5+ CGPA.**)

1. Aptitude Test:

The assessment consisted of **15 questions** to be completed within **25 minutes**. The questions covered topics such as **Areas, Simple and Compound Interest, Probability, Permutations & Combinations**, and **Problems on Boats and Streams**.

2. Technical Test:

From the initial 143 candidates, **38 students** advanced to this round. The test focused on fundamental concepts of **OOPs** and **DBMS/SQL** with the time limit of 35 minutes.

Out of the 38 students who appeared for the technical round, only **4 were shortlisted** for the final **interview round**, which was held at the company's **Goregaon office**.

Upon arrival, the first candidate proceeded for their interview while the rest of us waited in the **conference room**. During this time, we had the opportunity to engage in an **informal conversation** with the **Chief Architect** of the company. The discussion covered a wide range of

topics including the **company's vision**, **emerging technologies**, our **interests in EDS**, and current trends in the **tech industry**.

In addition to the informal discussion, he also asked each of us a few **HR questions** and some **technical questions** related to our **projects and ideas**. As I was the last candidate to be interviewed, I ended up speaking with him for almost **three hours**. While it wasn't officially mentioned, I believe this interaction may have also served as an **informal assessment** of our skills, interests, and overall fit for the organization.

2. **Round 2** - Technical Interview 1

During this round, the interview began with a few questions about my **projects**, followed by a **code debugging task** where I was asked to identify and fix an error in the given code. Next, I was asked to write an **SQL query** using the **OFFSET** and **LIMIT** clauses.

Following that, a **basic Data Structures and Algorithms (DSA)** question was posed, which I was able to **solve successfully using C++**. However, the interviewer then asked me to write a more **optimized version of the same solution in JavaScript**. I **struggled initially**, as I was more comfortable with C++, but I managed to complete the task—although I wasn't entirely confident about the correctness of my final solution.

The interviewer seemed slightly disappointed when I mentioned **C++** as my primary programming language. I reassured him that I had prior experience working with **Java** and could quickly regain proficiency if needed.

The interview continued with a few **JavaScript fundamentals** questions and concluded with a **puzzle question**. While I initially found the puzzle challenging, with the help of hints from the interviewer, I was eventually able to reach the correct solution.

3. **Round 3**-Technical Interview 2

Immediately after completing my first technical round, I was called in for the **second round**, which was conducted by the **Chief Architect** of the company.

The round began with an **SQL query** based on **JOINS** and **subqueries**, followed by a **basic DSA** questions. I was then asked approximately **10 fundamental JavaScript questions**.

During the interview, I was also asked to explain the **difference between SQL and NoSQL databases**, where I highlighted the structural differences, use cases, and performance

considerations of both. I emphasized the suitability of relational databases for applications requiring structured data, complex queries, and strong consistency.

Following this, I was asked to **draw the system architecture** of one of my projects and explain it in detail. I walked through the **core functionality**, the **inspiration behind the project**, and the **tech stack** used. I justified the choice of technologies and explained how each component added value to the overall system.

In particular, I discussed my decision to use **Supabase** over **Firebase**, citing benefits such as **Row-Level Security (RLS)**, **Role-Based Access Control (RBAC)**, and **PostgreSQL** support. I explained why an **RDBMS** was more appropriate than a NoSQL solution for my project, given the need for complex **entity relationships** and structured data. I also elaborated on the features of my project and their implementations.

Toward the end, I was asked to write **basic HTML code** and apply relevant **CSS properties** for styling. This marked the conclusion of my interview which lasted for more than 1hr .

4.Round 4-HR Interview-

About an hour after completing my technical rounds, I was called in for the **HR interview**. The HR began with a few standard questions such as "**Why do you want to join EDS?**" and "**How was your overall interview experience?**".

The conversation then moved on to questions about my **future plans**, particularly whether I intended to pursue **higher studies**. I was also asked about my **strengths and weaknesses**, as well as a few questions about my **family background**.

When I mentioned that my father is a **Senior Project Manager at IBM**, I was asked why I hadn't considered leveraging that connection to join IBM. I responded honestly, emphasizing my desire to grow independently and earn opportunities based on **my own merit**.

The HR round concluded on a positive note, and I was **offered the job** at the end of the discussion.

Useful Tips:

To prepare for the process, I **practiced aptitude questions** on **IndiaBix** and referred to the “**1000 Sanfoundry MCQs**” focused on **OOPs** and **Java**. I ensured that my **fundamentals in JavaScript and SQL** were clear, as questions from these areas are commonly asked.

One key piece of advice is to have **complete clarity about your projects**—know every detail thoroughly. Only mention technologies or features on your resume that you have **actually worked on**, as interviewers often ask in-depth questions about them.

The **most important factor** throughout the interview process is **confidence**. Your **body language** reflects both your **personality** and your **capability**, so it's crucial to maintain composure, answer every question with confidence, and wear a smile. Even if you realize that your answer is incorrect, acknowledge it politely and **assure the interviewer** that you will work on it.

Although I was anxious at the start—since this was my **first interview experience**—I treated it as a **win-win situation**: either I would gain valuable interview experience, or I would get placed.

Before EDS, I was unable to clear the Online Assessments (OAs) of **UBS**, **PhonePe**, and **MSCI**, but **EDS gave me the opportunity** to reach the interview stage—an opportunity I made the most of. So, **never lose hope**, because sometimes **all it takes is one chance to break through** and make your way forward.

And never, ever underestimate yourself. If you've put in the effort, you'll definitely get what you deserve. **Patience is key** during placement season—some of your friends might get placed before you, and that's completely okay. Just **stay calm**, **focus on your own journey**, and keep pushing forward.

It's important to **stay motivated**, and if at any point you feel overwhelmed or stressed, don't bottle it up—**talk to someone**, let it out. Remind yourself that you've worked hard, and instead of comparing yourself to others, just concentrate on giving your **best shot**.
