

Company: Edelweiss

Job Profile: SDE 1

Offer Type: Placement Only

CTC: 6 LPA

Location: Mumbai

Process Date: 27th March 2026

### **Placement Process:**

1. Aptitude
2. HR round
3. Technical round (CTO + DVP)
4. HR round (again)

#### 1. **Aptitude** [total 4 people]

The aptitude round was one hour long and was divided into four sections - Reasoning, Aptitude, Verbal, and Emotional Intelligence - with 15 questions in each section. Topics covered included compound interest, speed and distance, ratios, and seating arrangements. Time was a constraint, but the questions themselves were manageable and solvable with good preparation. I was able to attempt approximately 10 questions per section.

**Preparation Tips:** Practicing from IndiaBix is more than sufficient for this round. Focus on time management and attempt easier questions first. Regular practice on compound interest, ratios, and seating arrangements is recommended.

**Important Points to Remember:** Do not spend too much time on any single question. Since each section has 15 questions and time is tight, move on quickly if you are stuck and come back if time permits. There was no negative marking.

All 4 candidates were shortlisted for the next round.

#### 2. **HR round** [total 4 people]

This was a standard HR round that felt more like a casual conversation than a formal interview. It began with "Tell me about yourself." Other questions asked included how I feel about the work environment at Edelweiss, what I do apart from coding and what my hobbies are, explaining my projects and what problem they solve, and questions about my family background and what my family members do. There was also a discussion about how Edelweiss handles sensitive client data and why they cannot feed such data into LLMs. The HR had also asked me if I've researched about the company and if I have looked up any employees there. One candidate was unfortunately not selected after this round.

**Preparation Tips:** Be confident and conversational. Know your resume thoroughly, especially your projects - be ready to explain what problem each project solves in simple terms. Research the company beforehand so you can speak about their work culture with some awareness.

**Resume Pointers:** Make sure your projects are clearly described with the problem statement and solution. List hobbies that reflect personality and aren't generic. Keep your personal background section ready in your mind even if it's not on the resume.

**Important Points to Remember:** Treat this round as a conversation, not an interrogation. Be natural, smile, and engage genuinely. Knowing basic facts about Edelweiss.

### 3. Technical round [total 3 people]

This round was conducted by the CTO and DVP. The questions covered OOP pillars with a request to give a real-world example from my own project where I applied them, a deep dive into my project and internship experience and how they work, the difference between NoSQL and SQL and a system design scenario where I was asked to build a PolicyBazaar clone and choose an appropriate tech stack.

For the PolicyBazaar clone, I suggested React for the frontend and .NET for the backend, reasoning that the existing team would likely be familiar with it. When asked about handling document uploads such as insurance documents, I proposed using a relational database like PostgreSQL where a documents table would have a foreign key referencing the primary key of the users table, and a column storing an array of URL strings pointing to documents stored in a private S3 bucket.

**Preparation Tips:** Revise OOP concepts (Encapsulation, Abstraction, Inheritance, Polymorphism) and have a concrete example from your own project ready for each. Be comfortable explaining your projects and internship work end-to-end. Practice basic system design - especially around databases, storage, and API design - as scenario-based questions are common.

**Resume Pointers:** Only mention projects and internships you can speak about confidently and in depth. Be ready to justify every technology choice mentioned on your resume.

**Important Points to Remember:** If you forget something mid-answer, do not panic or go silent. Just continue speaking and move forward. If you genuinely cannot recall something, say so honestly rather than fumbling. Interviewers appreciate composure and clarity of thought far more than a perfect answer delivered nervously.

### 4. HR round [total 2 people]

This final HR round was primarily informational rather than evaluative. The HR representative explained what Edelweiss does as a company and walked me through the benefits of joining, such as access to experienced mentors and growth opportunities within the firm. It was more of an onboarding conversation than a screening round.

**Preparation Tips:** Listen actively and ask thoughtful questions about the role, team structure, or learning opportunities. This is your chance to show genuine interest in the company.

**Important Points to Remember:** Even though this round feels relaxed, remain professional. Show enthusiasm about the opportunity and the company. Asking one or two genuine questions about the role or the team leaves a positive impression.

There were 2 groups each consisting of 4 people each. I was a part of the first group and 2 of us had received the offer letter.
