

Tushar R C Raja
Computer Engineering

My Resume

Company: IDFC First Bank

Job Profile: Application Developer

Offer Type: [Internship + Placement]

Internship Stipend: Not Specified (but I asked my seniors , roughly 40k per month)

CTC: 18.10 LPA (Fixed: 14 LPA + Joining Bonus: 2 L + Variable: 2.10 LPA)

Location: Intern bootcamp (most likely Bangalore) and then Bangalore/Mumbai

Process Date:

25/7/25 : PPT

28/7/25: OA

30/7/25 : Interviews

Before you read, I want you to have faith in your hard work. I was trying hard, very hard. Sometimes things are random, and success also depends on your luck. So don't get disheartened. You just need to get an offer from one company. :) I myself cleared every online assessment (for 8 companies), and IDFC was my ninth interview. :) Just trust destiny, trust your hard work—nothing goes in vain. TRUST GOD'S PLAN! :)

And yes, pardon me for my English in this document. It is a raw, honest doc. Remember, this is just for REFERENCE, and your interviewer might be an expert in another domain.

Placement Process:

1. [Online Assessment] [135+ Students were shortlisted]

The OA had a few sections: Logical Aptitude, Technical Questions, and a final DSA section. Each section had its own timer. It's all about being choosy and smart enough to identify which questions are the low-hanging fruit for you.

Aptitude Section:--->

Following is just the tentative vague description and not the exact question (I really can't remember the exact questions , but this description will really help you get a clear idea)

- 1) Coding-Decoding Analogy: If "FADE" is "GBWR" then follow the same pattern for some "xyzw" type of string
- 2) Number Theory: how many pairs(a,b) are there wherein division of a/b is not an integer {1,2,3,4...16} something like this.
- 3) Logical Reasoning Passage: A big 3-4 questions passage (Some 6 people, given *word-equations(ratio etc) of relations of their savings and salaries*) and then follow up questions (easy but time consuming)
- 4) Statistics: Mean, Variance, Standard deviation, *Coefficient of Variation* type of questions. (Mean of 10 students is 3, but then some student has mark correction and then find new mean)
- 5) Basic Probability types question (12 box, 3 has trap, so P(no trap))
- 6) Question like how many pair of letters are there for "HERITAGE" having as many letters as there in english alphabet series (something like this)
- 7) Profit % types question
- 8) Pipe-work time types question

Technical Section:--->

- 1) Proper Loops (do-while etc) as a figure, and then interpret the figure and tell how many times is the code running.
- 2) Some oops (basic) questions
- 3) Standard OS, CCN, DBMS, SQL questions
- 4) Port, Ping, Router, Queues, Quick sort, static keyword numerical, pointers numerical

```
int arr[] = {10,20,30,40,50,60,70}
```

then something like `int *r=arr.... *r1=arr+2 .... *r2= arr+5...` and then `cout<< something related with r1, r2 etc`
- 5) Binary search tree array = {4,1,2,16,8,33,62,76} something like this, what is left child of root.
- 6) Queue <int> of size 4, some position of front, rear pointers, removing 3 elements, and then MCQ based on the state of the queue.
- 7) 2D matrix figure based manipulation question (flowchart based)
- 8) Mysql type question (easy)
- 9) OOPS (conceptual easy question) of inheritance, output based, etc
- 10) One crazy question about OS of CISCO organization for switches
- 11) Basic data structure type question (medium gate level question) : output based
- 12) How many times the flowchart's loop is running.

Coding question:--->

1) How many elements are there which are in the correct place and not in the correct place.

Correct place means Rightly indexed when seen from a Sorted perspective. (easy isn't it?)

ex: 1 3 2 4

sorted is 1 2 3 4

1 and 4 are in the correct place , whereas 3 and 2 are not in the correct place.

2) Given int x, int y and then count special numbers from x and y.

Special number means $\text{SUM}(\text{DIGITS}) == 2 * (\text{highest digit})$. Easy??

Points to ponder:--->

- 1) Be calm
- 2) Manage time smartly
- 3) Attack on low-hanging fruits first
- 4) Attempt questions which you are familiar first
- 5) Learn to leave lengthy questions
- 6) Don't get zoned out , every 1 minute has the same value :)

2. **[Technical Round 1]** [41 candidates] (70-90 mins++) {Taken by 2 interviewers}

- 1) Introduce yourself
- 2) Was asked question on my projects
- 3) Specify about Skills , Tech Stack that you have practiced
- 4) DSA Question (Revolving around Bellman-ford algorithm)
- 5) What is a cloud? Proxy Server?
- 6) SQL vs MongoDB , which I have used in the project ? Why? Why not?
- 7) Real word Application for Abstraction , Stack , Queue and Tree and Graph
- 8) Port number of Mysql
- 9) Heavy discussion on my projects (AIML based) (Maths behind Random Forest , Logistic Regression) . Focus on Pipelines and Flow of building an ML Model (decide , Train , test , tune etc etc)
- 10) It is impressive if you have published some research paper (or it is in under progress)
- 11) Indexing in Databases
- 12) Varchar in SQL , why varchar ? How to change the Varchar (LENGTH) once the table is already created.
- 13) Triggers in SQL
- 14) Library in Python which I have used (numpy , nltk , pandas , sci-kit , openCV)
- 15) Docker ? Kubernetes (I didn't know Kubernetes Technicality)

- 16) Was Asked about my approach to the latest DSA problem which I had solved (it was about Trie with Bits and finding the Maximum XOR)
- 17) Final question for the interviewer? : I asked : how was my interviewer and where am i lacking , they said it is important that as a developer , we must have some knowledge about cloud , how to deploy , some advanced real life usage of networking(ccn) , code to be written not just for localhost , but a scalable code for development+deployment etc.

Mind it:--->

- 1) Never give up while giving interview
- 2) Even if you don't know, try to struggle with the question , tell the interviewers about your perspective, they are really interested more on how you think about approaching a problem , if you succeed in this way then this is really impressive
- 3) Sometimes you may even get a question that “hey AIML project is all about templates etc ”, that’s where you must say that while making a project it is also about proper lifecycle of development and building model , which task? Which model? Why this? Why not that etc ?
- 4) Never say anything negative , it may backfire you during the interview.
- 5) Don't break down,if your interviewer is an expert in a field like (cloud computing) and you have zero idea on that field , just be real-self.

3. **Technical Round 2** [22 candidates] (90-100 mins++) {Taken by 2 interviewers}

- 1) Introduce yourself
- 2) One DSA code to be written on an online compiler. Mine was an easy question: Find peak element in an (increasing and then decreasing type) of array (Binary search) , just ask a clarifying question , what if n==1?==2? and then what if len(decreasing part)==0?
- 3) Indexing in Database (but advanced level)
- 4) SQL query optimization, I was asked to first tell Select * from table with name like “T%” and then to optimize this query. (even if you don't know , just try to deliver a valid logic)
- 5) Again Applicability for all projects, WHY this ? WHY not that?
- 6) OOPS: Compile-time and run-time polymorphism (overloading , overriding ,constructor , public , private , inheritance , Abstraction , encapsulation) All these in real-life
- 7) LLD design for Bank system , make classes , interfaces , controller(if you don't know , then study it beforehand) , methods , etc , clean code for RBI class (parent class) and then subclasses like IDFC bank , SBI bank etc , and each having some rules, compliance rules, seniorcitizen_Age etc , revolving around inheritance etc.
- 8) What happens when you type a message in whatsapp to your friend? what happens when you click on “send message” button.

- 9) How do you think messages travel from your phone to your friends phone? Protocols, headers , packets , trivial CCN stuff.
- 10) What are keys , why keys , normalization , MongoDB familiarity?
- 11) Code for Trigger (After Insert) , just insert the curTime in logs
- 12) Was asked about familiarity with Stored Procedures
- 13) Asked about HSS-Psychology course
- 14) Was asked about Data analytics and my QGIS findings of land cover change
- 15) Was asked about my (Airavat,Flipkart grid) Hackathon experience , projects etc
- 16) Final question for interviewers? I asked : Is there any way to do “Online transactions on mobile for metro between Ghatkopar and Azad Nagar without Internet” , then we had a healthy discussion for about 5+ minutes on this topic.

4. **[HR Round]** [9 Candidates] (20 mins++)

This was a fairly relaxed round, and the HR representative was very friendly and made me feel comfortable. The conversation included the following questions:

- 1) Something cool about me which I have not written on resume (I told about my love for chess)
- 2) Why do you want to join IDFC bank ? (Reality: Along with coding , I could know about ITR, finance , economics , equity , IPO , banking sector etc.)
- 3) Dream company apart from IDFC bank? (I told about my love for space , stars and ISRO)
- 4) How do you deal with rejections (on-campus 8 times)?
- 5) What if I wasn't selected today also? (Grind for the best opportunity)
- 6) Any creative Application ideas for HR? (I first bulleted the answer but she told me to think again and come up with a brilliant idea, so i presented my idea for emotion-detection-AI powered priority wise scheduler chatbot / employee-HR relation management site with color coding feature). She was really impressed by this idea thought in a shorter timespan. Like she told me such an application is being used by her and that this idea was amazing.
- 7) Where do I live ? What do I do in my travel time to college?
- 8) Some behavioral question and that's it
- 9) Any final question for her :- I asked her about the Location for internship and then placement, She told that bootcamp may be in Bangalore and then Joining for placement maybe in Mumbai.(most likely)

5. **[Business Round]** [9 Candidates] (20-30 mins++) {Taken by 1 interviewer}

Okay so I was pretty sure that yes I had made it to the end , and then we got to know that there is one more Technical Round with the senior engineers or VP or architects of the company.

It was an online round on Teams. I would recommend you to give it from college only , because there you will have support from college , TPO office , supportive TPCs (yes they really work hard for our placement for that entire day+night) ,Wifi , HRs etc. So even if there is some wifi problem or technical issue , they are there to handle it (SO GIVE IT FROM COLLEGE ONLY !!!)

- 1) Hey Tushar , Introduce yourself
- 2) Seen my resume (Screen shared)
- 3) Talked about my skills
- 4) Discussed about my projects (the one with the most impact driven cause to be discussed along with full flow , architecture , why this and why not that , the mathematics behind this-that , the impact it is having)
- 5) My interviewer was a senior architect. He was really very chill and made me feel comfortable even after facing some technical issues (wifi problem at 8:05 pm).
- 6) Final questions for him? :- I told him that I had presented my views(Technical round 2) on “online transactions on mobile without internet” and what his opinion was on this point. He praised this idea and said some work is going on by RBI and all banks and that there is a good scope in this field.

After appearing for almost 9 companies, cracking OAs , failing in some Round 1, sometimes Round 2 , Sometimes even after HR round :(, but that day I was confident that yes , I think I have cracked it. It was around 9pm when we left for our home.

Next Day , at 11:11 AM :) We got to know that 8 students have been selected for this role ,And finally the hectic game has finally reached its final Destination .

Useful Tips:--->

- 1) Try to maintain a good CGPA , Mine was 9.86/10 which was quite impressive (in all 4 rounds)
- 2) Never say that I don't know , Try to understand any question , ask clarifying doubts and Try to connect the dots (It will really have a good impressive ,trust me)
- 3) Before your placement season starts , even if you code in X language(cpp) , learn about oops in Y (java) , Know about LLD , HLD also (system design).
- 4) Instead of depending on short notes for DBMS, CCN, OS etc , Study from standard Books (foreign authors like Korth , Navathe , Kurose , Tanenbaum or refer GATE lectures on YT). Trust me it will really make you unique.

- 5) If given a chance to be back in time , I would focus on real time deployment , Cloud , Ports (Socket programming) and docker+kubernetes.

Thanks for reading till here , Remember “Good Things are Coming”.

Ready to Grind??

- 1) [SQL QUESTIONS](#) for Interviews (Do both Databases) just like Leetcode , Trust me you'll like it , It has solutions section also.
- 2) [Friendship with Language](#) if you haven't done DSA ever
- 3) [Conceptual Clarity?](#) if you know about your programming language.
- 4) If you know the drill of DSA : then Give Biweekly and weekly Leetcode contests, Never go for ratings, Never solve daily questions just for FOMO or BADGES , be real and truthful atleast with yourself.
- 5) [JAVA and OOPS](#) if you really want to answer with confident in interviews
- 6) Technical Subjects:

Books : Subjects

Korth-Navathe : DBMS

Jim Kurose : CCN

Silberschatz : OS

Tanenbaum: distributed systems (Basic understanding for HLD)
- 7) If you want to crack your interview in one go ,(Study different System) : LLD
Start with Snakes and Ladder and increase the complexity.
Know about classes, interfaces , Getter , Setter, Constructor , extends , implements. Show modularity of code , try to write clean code and congrats you will never be rejected.
- 8) I have seen people doing Striver sheet etc , you may do it for DSA in your First year or second year.
- 9) Make sure to check [Puzzles](#) , as you may encounter them (sometimes)

10) It's never late !? ... Set time $t=0$, and Start having “ honest consistency “ , GFG problem of the day? or Leetcode daily challenges (Or do daily problems but have a delay of 2 months like if today is 1 August 2025 , then solve the daily challenge problem of 1 June 2025).

11) Write code on pen-paper, Dry run , Draw recursive trees for DP. Follow one thing with full stewardship. Don't watch youtube lectures blindly.

If you have any query, Connect me at [My LinkedIn](#) .

Byeee 😊
