

Mohit Karande

CSE AIML

Company:ISS-STOXX

Job Profile:Software Engineer

Offer Type: Internship + Placement

Internship Stipend:60000

CTC:14 lpa(12.9+1.1)

Location:Nesco IT Park, Goregaon, Mumbai

Process Date: 05-08-25

Placement Process:

1.Pre Placement talk(Day before the next rounds)

2.Online aptitude test(On campus)

3.Technical round

4.[HR](#) round

Eligibility criteria -7.5 CGPA and above

Round 1: Online Aptitude Test

Approximately 150-160 students participated in this on-campus round. The test was divided into four sections with a marking scheme of +1 for a correct answer and a penalty of -0.25 for an incorrect one.

- **Java (18 Questions):** This section focused on fundamental concepts, including output-based questions, threads, Object-Oriented Programming (OOPs), and the Stream API.
- **Python (17 Questions):** Similar to the Java section, it covered basic Python principles like slicing and OOPs concepts.
- **SQL (5 Questions):** This part involved basic SQL queries where I had to select the correct query for given table structures from multiple-choice options.
- **Quantitative Aptitude (30 Questions):** This section featured a wide range of topics, including questions on stocks, simple and compound interest, speed of a boat, probability, and permutation and combination.

Round 2: Technical Interview

Forty-five candidates were shortlisted for the technical round. My interview, which lasted about 15-20 minutes, began with the interviewer asking me to introduce myself. Following my introduction, I was asked to explain one of my projects in detail.

Key discussion points included:

- **Java Collections Framework:** I was asked, "What do you know about the Collection framework?". I confidently answered that the framework consists of interfaces like List, Map, Set, and Queue, and classes such as ArrayList and LinkedList. When asked about the hierarchy of the framework, I replied that I didn't remember it completely.
- **Code Explanation:** The interviewer presented a code snippet from the aptitude test related to encapsulation and asked me to explain its functionality and output. I explained how the code worked and what the result would be.
- **Object-Oriented Concepts:** As a follow-up, I was asked how I would initialize a variable without using a setter method. I answered that I would use a constructor. I was then asked how to make the class immutable. I explained that I would make all variables private and final, remove the setter methods, initialize variables only through the constructor, and make the class final so it could not be extended. The interviewer questioned if I was sure about making the class final, and I confidently confirmed that it is necessary for immutability.
- **Data Structures:** I was then asked to explain the output of a code snippet from the aptitude test that used a Map and a List. I had to describe what the output would be if I used a HashMap, HashSet, TreeSet, and LinkedHashSet for a specific input.

It was noted that the interviewer for my panel conducted interviews quite swiftly, with some lasting only 10 minutes.

Useful Tips:

***Be Thorough with OOPS concept in java or python**

***It is acceptable to admit when you don't know an answer, as interviewers don't expect you to know everything.**

Round 3: HR Interview

Fifteen candidates advanced to the final HR round. The panel consisted of the company's HR representative and the Managing Director of the Mumbai office. My interview lasted for about 30 minutes and covered the following areas:

- **Introductions and Background:** The HR representative asked if I knew who they were, and I replied that I unfortunately did not. They mentioned they had presented at the pre-placement talk, and I explained that I had to attend the session while traveling due to lectures, which they understood. They then introduced themselves. I was then asked to introduce myself and detail my educational journey starting from my 10th-grade school.
- **Personal Details:** I was asked where I reside, how many members are in my family, and if I was aware that the company was located in Goregaon and how I would travel to the office.
- **Project Discussion:** The HR representative asked about my project, what I liked about it, and what parts were difficult to implement. Later, the MD asked me in detail about all the technologies I was comfortable with and went through my projects in fine detail.

- **Career Aspirations:** The HR representative asked me what kind of role I was looking for, specifying backend, frontend, or something else. I replied that I was flexible, eager to learn new technologies, and didn't mind working in any role.

Following the interview, I was told that I could leave and that the results would be shared with the TPO at the end of the day.

Useful Tips:

***Practice DSA properly ,Even Though I was not Asked to code anything I was well prepared for DSA questions.**

***Be Thorough with the Basics of the Courses you have mentioned in your resume.**

***Be Thorough with your projects.**

All the best for Placements !!
