

Company: InCred Finance

Job Profile: Business Analyst

Offer Type: Internship + Placement

Internship Stipend: ₹25,000/month

CTC: ₹12 LPA (11+1)

Location: Mumbai (Andheri/Bandra/Thane)

Process Date: 22nd July (PPT), 24th July (Test & Interviews)

Placements are a tough journey, have faith in god and your hardwork, you just need one lucky day and the world will be yours.

Placement Process:

Stages: Resume Shortlist → Pen & Paper Test → Technical Interview → Final Interview

Resume Tips:

The shortlisting was relaxed with a 6.0+ CGPA cutoff. I submitted a tech-heavy resume, but in hindsight, adding one or two business case studies or cross-functional experiences would help. Focus on data-driven and machine learning projects.

1. **Pen Paper Test :- Candidates Appeared: 102 | Test Duration: 1 hour**

- **Section 1: Aptitude (8 Questions, +3/-1)**

Topics included:

- Coordinate geometry (line/curve equations)
- Speed-distance
- Work-time
- Number systems

Time management is key — solve this in 15–20 mins max.

- **Section 2: No Negative Marking (12 Marks Total)**

- **Python Pseudo-code (4 Marks):**

- Predict the sum of the series:
0, 2, 6, 12, 20, 30... (1 mark)

→ Pattern: $n^2 + n$

- Another sequence (3 marks):
-1, -1, 5, 19... – slightly tricky and I couldn't fully crack it
→ Don't panic if one question goes wrong

- **SQL (8 Marks):**

Tables: Student, House, Test

Sample queries:

- Avg/Max/Min marks per student
- Second-highest marks
- Rank houses based on top performer
- List test types and students who didn't attempt them

Prep Advice:

- SQL: Leetcode Top 50 is enough
- Apti: Practice from IndiaBIX
- Python: Brush up number series logic & patterns
- Tip: Don't freeze. Presence of mind > perfection

Do the SQL top 50 on leetcode that would be enough.

2. **1st Technical Round**:- 40 people advanced

- Resume deep-dive (Types of ML Algorithms/Technologies used, and Why)
- ML algorithm intuition: R^2 , RMSE, classification metrics. (Because It was on my resume)
- Career goals and why shift from tech to analyst role
Others were asked SQL joins, Pandas basics, API logic — nothing too difficult if you built your projects yourself.

3. **Final Round (Tech + HR + Case Study)** : 11 people advanced to this round

A hybrid round testing communication, fitment, and problem-solving.

Questions I was asked:

- Tell me about yourself
- Resume walkthrough
- **Case Study:** Improve profitability of a logistics company with 1000 trucks
 - Ask clarifying questions
 - Segment the problem
 - I brought in AI/ML and compared with operations from airline industry
- **Guesstimate:** “How many tennis balls can fit inside an airplane?”
 - I wasn’t exact, but spoke aloud my approach and kept calm
- Generic HR: 5-year goals, Why InCred?, Why this role?

3 students got placed in InCred

Useful Tips:

- Strong SQL and Aptitude prep is non-negotiable
- Practice number-based pseudo-code logic for Python
- Read business articles, know macro trends & company backgrounds
- Mock interviews + case cracking frameworks help
- Always **think out loud** — it shows your reasoning
- Be calm, even when stuck. Interviewers often help if they see effort.
