

Company: KPMG

Job Profile: Analyst - Digital Enablement

Offer Type: Internship + Placement

Internship Stipend: 20000 INR/ Month

CTC: 5 LPA Fixed + Variable + Other benefits

Location: Not disclosed yet

Process Date: 11th September 2025

Placement Process:

Initially it was announced the process would be an OA test, Group discussion, 2 Technical rounds and 1 HR round. But the group discussion was cancelled and they directly moved to technical rounds after PPT.

1. [OA test] [About 20 candidates for second role only]

It was a simple aptitude test of 45 minutes which had 55 questions with 3 sections being Aptitude, Quantitative analysis and verbal ability. Test was fairly easy and mutual discussion among other candidates made it evident the cutoff was a bit low. Though questions were easy, what mattered here was solving speed.

It was conveyed that those who applied for the first role and cleared the test of the first role were allowed to sit for the second round directly if applied.

2. [Technical round 1] [14 candidates]

They proceeded to take technical rounds and skipped the GD round after a brief online PPT which was conducted along with SPCE students. 14 candidates were divided into 2 panels of 7 candidates in each. Interviews were conducted online form on microsoft teams and were spaced in 20 minutes per interview.

As soon as my interview started, I was asked to introduce myself. I started by talking about my current branch and hobbies and how I am interested in software engineering. But I fumbled hard. I was stammering. But during this first 1 min of introduction the interviewer interrupted me and asked me to take a pause because he needed to attend a call. After he was done with the call in a minute he asked me to speak further. I asked him if it was okay to start over to which he said yes. From here on it went smoothly. I was able to smoothly speak and introduce myself, my hobbies and interests.

In my resume I had mentioned my recently completed remote internship and 3 projects. He proceeded to ask me about my internship, my designation, what I did in the internship and the project I got to work on. I described everything in detail for quite a while. He then asked me about my projects, first one being ML based. So he started asking me what I used, and asked some small questions on the concepts I mentioned in the bullet points and also on the technologies used. He moved on to the second project, which was a small AI based project I built in a hackathon. I described the entire pipeline of the project and how I built it from

scratch in detail. He was impressed with this. He then asked me about my skills I mentioned, one of which was google cloud platform which I hadn't touched in a while and feared I might fumble this. He also added another question on genAI with it which I answered first and managed to somehow dodge the question on GCP.

He then ended the interview. Interview was a total of 30 minutes so he didn't get to ask much on my other skills. He did ask about my hobbies one of which was Linux and Linux distro hopping which he was surprised to hear about. Other candidates were asked some other basic CS fundamental questions and basic DSA. Basic DSA was mostly just either sorting algorithms or questions on time complexity of given operations.

3. **Technical round 2** [6 candidates]

6 candidates were divided into 2 panels again.

This time, the interviewer in my panel was a partner. He asked me to introduce myself, which I gave very similar to my first interview. He proceeded to ask about my internship more in this round. But as I was describing the project in the internship, I was interrupted. Interviewer suddenly asked me about location preference which I felt was strange for a technical round. He then ended the interview, which made it not even hit the 10 minute mark.

4. **HR round** [4 candidates]

4 candidates were moved further in the process.

HR round was mostly chill, HR asked basic behavioural questions (ex. How would you deal with conflict between two team members, etc.). And ended the interview by asking location preference and if we were mentally ready. It was about 10 minutes in duration.

Out of these 4 candidates from HR round, 3 were sent a Letter of Intent and 1 candidate from the technical round 2 was also sent a letter of intent.

Useful Tips:

1. Primary step is to practise DSA and CS fundamentals! No matter what company, they will always expect this from you.
2. What I feel is, communication is important. If you are able to communicate with the interviewer properly, you have an edge over other candidates.
3. For companies like KPMG, practices Quantitative analysis and aptitude from websites like geeks for geeks.
4. For resume, follow standard practices like using LaTeX resume templates (like Jake's resume), keep good ATS score (use resume worded website, get a score of about 50-60 and it's good to go in resume shortlisting). Be precise and give 3 points per project and quantify results.
5. It was my personal observation here, that all selected candidates in technical round 2 had some kind of internship experience, so maybe the interviewers desired previous experience, but this is only my

speculation. I would still suggest doing summer internships and part time internships to gain real world experience.
