

Company: Oracle Financial Services Software

Job Profile: Associate Consultant

Offer Type: Placement Only (Full Time)

CTC: 9.8 lpa

Location: Mumbai, Bengaluru, Chennai & Pune

Process Date: OA-15/09/25 Interview-08/10/25

Placement Process:

- 1) OA
- 2) Technical Interview 1
- 3) Technical Interview 2
- 4) HR Interview

1. Online Assessment Round:

The online assessment was conducted on the **HackerRank platform**, consisting of **36 questions to be solved in 120 minutes**. The test covered a mix of topics including **Computer Networks, Operating Systems, SQL, Logical Reasoning, Probability**, and **Puzzles**, along with **two coding problems** based on **Tree and Dynamic Programming (DP)**.

There were also multiple SQL query-based questions that tested basic to intermediate understanding of joins, aggregate functions, and constraints. The non-technical sections focused on logical reasoning and quantitative aptitude, including probability-based word problems and short analytical puzzles.

The good part was that we got to attempt the test online from home since it was raining heavily that day, which definitely reduced some stress. Overall, the OA was moderately difficult. The key was to maintain speed while balancing accuracy across both the technical and reasoning sections.

2. TECHNICAL ROUND 1 [27 students were selected for the technical interview]

The first question was the usual: **“Tell me about yourself.”** I gave a brief overview of my **education background, technical skills**, and the **projects** I had worked on. From there, the interviewer moved straight into my project section.

I mentioned my CI/CD project, so most of her questions revolved around **Kubernetes, kubectl, Jenkins, Minikube, replicas**, and how **Kubernetes detects high traffic**. I was able to answer most of them confidently, though I struggled with a couple of deeper ones. She appreciated my overall understanding and moved on.

Next, she asked me to **write a simple REST API using the @GetMapping annotation**, and then to **draw the architecture showing frontend-to-backend connectivity**. After that, we shifted to **Java** — she asked

about the **differences between Java and C++**, their **advantages**, **data types in Java**, and the **types of for loops**.

Then came a quick **DSA question**: reverse a string. It was straightforward, and I solved it easily. She followed it up with **two basic SQL queries**, one using WHERE and ORDER BY, and another involving an INNER JOIN.

After the technical part, she asked a few **situational questions** like *“How would you disclose bad news if you were a manager?”*, *“How do you handle stressful situations?”*, and *“What did you learn from such experiences?”*

We ended up having a really good discussion around these. At the end, she asked if I had any questions. I asked her two things *“What advice would you give to freshers joining Oracle?”* and *“How is Oracle adapting to AI?”* That sparked another nice conversation, and overall, the interview felt **very friendly and conversational** rather than intense. This round lasted for about 40-45 minutes.

3. **TECHNICAL ROUND 2** [around 20 students appeared for it]

The second round started almost immediately after the first barely a five-minute break. I greeted the interviewer, and we shook hands. He began by asking how my first interview went. Since it had ended on a friendly note, I felt quite confident and shared my experience with him.

He then asked me to introduce myself and followed it up with an interesting question, *“What mistakes did you make in your previous interview?”* I mentioned one of my small mistakes and explained how I had already learned from it and corrected it. He seemed to appreciate that honest answer.

Next, he started asking questions about my **AI project** mainly *what it does*, *why it's needed*, and *how it works in practice*. He even asked me to **show the deployed version** of the project. After that, we moved to **SQL**, where he asked about **different types of joins** and **cursors**, which I was able to answer confidently.

Toward the end, he asked if I had any questions. I asked him the same ones as before *“What advice would you give to freshers?”* and *“Will the duties of an Associate Consultant be completely technical, or will they also involve functional responsibilities?”* That led to another engaging conversation. I also mentioned that my previous interviewer had told me about Oracle's AI initiatives, so I asked him a bit more about that too.

Overall, it was a **short and smooth round**, around **15 minutes long**. The discussion felt more like a conversation than an interrogation. I was lucky with my panel some other panels went on for over an hour and a half.

4. **HR ROUND** [Around 12 students appeared for it]

The HR round was short, lasting about 5 minutes. The HR started with some basic questions about my nationality, and whether I was aware of the role Oracle was offering. She then asked if I would be comfortable with relocation.

Next, she asked if I was planning any further higher studies. I humorously replied that this is my “higher studies” since I’m already pursuing my master’s degree. The conversation then moved to the internship I need to complete for my course. She asked what I would do if the company offered me a PPO. I lightened the mood with a joke, saying I definitely wouldn’t reject Oracle.

That was essentially it, the whole round was relaxed and quite casual.

[12 students received offer, 6 of them from MCA]

Useful Tips:

Always keep a smile. It instantly lightens the mood and helps the interview flow more naturally. Even if you’re nervous, a calm and pleasant expression makes a big difference.

Don’t panic. Once you start panicking, it affects how you think and respond. Take a breath before answering it’s okay to pause for a moment and gather your thoughts.

Never lie. If you don’t know an answer, start with “*I think...*” and try to reason it out. But if the interviewer keeps digging deeper, be honest and admit you’re not sure. They appreciate honesty more than guessing blindly.

For DSA, I’d recommend **NeetCode 75** it’s concise and covers all core patterns. But don’t just focus on DSA. Prepare **OOPs**, **SQL**, and **core CS topics** like OS and Networking too.

For Aptitude, try solving from **InterviewBit’s aptitude section**, it’s straightforward and helps you build consistency.

Be thorough with your resume. Know every line of it and never include something you can’t explain in detail.

Luck plays its part. Sometimes it’s about the panel you get or the questions asked but solid preparation and the right mindset always tilt luck in your favor.
