

Company: Oracle Financial Services Software

Job Profile: Associate Application Developer

Offer Type: Placement Only

Internship Stipend: N/A

CTC: 15.23 LPA + USD 16K worth stocks over 4 years + relocation + gratuity.

Location: Bengaluru, Mumbai, Chennai & Pune

Process Date: OA-15/09, Interview-17/09

Placement Process:

Eligibility Criteria:

Academic Eligibility :

CLASS X - Required: 70%,

UG - Required: 7 CGPA, Ac

CLASS XII - Required: 70%

1.OA [All unplaced, eligible btech & mtech students]

On hackerrank platform.

Had to be given from home due to heavy rains.

95 minutes long test.

3 sections: Aptitude, Coding, Fundamentals

Aptitude: [12 Questions]

Questions were easy to moderate

Resource: Cocubes test series on testbook, <https://testbook.com/cocubes>

Fundamentals: [20 Questions]

They were on the tougher/advanced side.

Topics: Cloud migration, Network layer (OSPF), DFS, etc.

Coding: [2 Questions]

Both were easy-moderate level, everyone had different questions.

Q1. Request Rate Limiter

- Given a list of requests with (userID, timestamp), determine whether each request should be allowed.
- A request is allowed only if the user has made fewer than k requests in the last **1-minute window**.

Example:

n = 3, user = [1, 1, 1], timestamp = [6, 10, 65], k = 2

Output → [1, 1, 0]

⇒ Implemented it using HashMap and deque.

Q2.BFS(implemented using 3 hashsets(would recommend to use queue rather)).

Last to last year when they came for same role,OA consisted of one rest api and one dsa problem but this time both were dsa.

25 students were shortlisted.

2.Tech(60%) +HR(40%) [25 students]

Q.Introduce yourself.

Q.Your Projects.

Q.SQL vs NOSQL.

Q.Stored procedure in sql(couldn't answer it)

Q.Update wherever name=adithya to adithya nair in sql (wasn't really confident about my answer)

Q.Primary key and foreign key with examples,write it on paper

Q.Write api's in ur projects(wasn't really confident about my answer)

Q.C/C++?

ME: "JAVA"

Q.What are DTO?

Me: "DTO In JAVA???No idea,never heard bout it."

Q.Why ORACLE?

Q.If you've all the resources on this planet what would you do?

Me: "I would complete my major project" LOL

Interviewer: "No something else"

Me: "Oh okay since I have all the resources on this planet,would solve most important problem like building mechanism to utilize solar energy much more efficiently since there will be shortage of electric energy in future."

Q. How many 1cm side cubes can be fit in 9cm side cube?

Q.Pillars of OOPS.

Also while explaining my project "shit like that" slipped out of my mouth,I instantly apologized, she wasn't looking happy about it.

Overall techwise the round went terrible for me,I wasn't expecting to be called for next round.Only thing that went well were hr questions and I was clear about what I knew and what I didn't.

3.Tech(25%) + HR(75%) [I believe around 10-15 students were called]

Q. Tell me your entire background, everything.

Q.What went wrong with jee?(I had mentioned I couldn't score well in jee)

Q.About Projects, Hackathon.

Q.Your project seems very basic, no ai, data ,or any buzzwords?

Me: “I wanted to solve real life personal problems”

Then for next 10 mins he was convincing me to join as a business analyst.

Him: “I’ve 600 people working under me,400 developers and 200 B.A.’s, I respect B.A.’s more”

I said tech excites me more than anything else, then eventually he asked me if I am willing to do DevSecOps,

Without a second thought I agreed. He warned, it is super tough, barely any engineer under him completely understood K8s and if any problems occurs y’all are blamed first and fired. Then asked about anything I knew of devops,since I had taken cloud computing in last sem,I knew basics.

Q.Explain docker, microservices,K8s

Then he pulled out his phone, turned chatgpt on voice mode and asked me to learn about K8s right in front of him. The lady which took my first round came to the cabin as well. It felt weird, they both were sitting across the table and I was talking to gpt.

Then asked about location preference and discussed bout why I prefer moving out ,and ended the round.

Total 8 were selected.

Useful Tips:

Communication should be top notch; you don’t have to know everything in tech but can’t lack in communication and self-confidence.

Get a good sleep one night before interview. In majority cases, OA shortlist is released one night before interview. I’d strongly suggest to get a good sleep rather than preparing all night for interview, I’ve regretted it every time.

Finally, **be patient**. This was my 10th interview; I’ve failed 9 company interviews before ofss.

I’ve seen people better than me getting into worse companies that came early, and also people less capable than me getting into better companies.

There are a lot of uncertainties, and be prepared to handle them.

And for OFSS,the HR literally told they have vacancy for everyone who came for interview, all we had to do is explain what we have done throughout our college, and be honest & confident.

Please feel free to connect and ask anything :[LinkedIn](#)
