

Company: OFSS
Job Profile: Application Developer
Offer Type: Placement Only
Internship Stipend: NA
CTC: 1523000 + Stocks with vested period (USD 16,000)
Location: Mumbai , Pune , Bangalore , Chennai
Process Date:

Placement Process:

There were 4 rounds : OA , TR1 , TR2 and HR round . The OA was conducted on 15th sept which had 2 dsa qts and 32 mcqs - 20 computer fundamentals + 12 apti qts. Before the technical round 1 we had a ppt where I asked 2 questions . It didn't play a very important role for me but it might help you , so ask if you have even a small doubt in your head don't hesitate to ask but if you don't it's okay, no pressure .

1. Tech Round 1 [No of candidates who appeared for this round : 25] [30-40 mins]

The PPT was supposed to start at 8:45 but actually began around 10, and the interviews started at about 11:30. I know the waiting can be really nerve-wracking, but try to stay calm if possible.

During my interview, I went in and greeted the interviewer with a handshake. She started by asking me for my introduction, and then the very first question was: Why Oracle? (I was asked this in all rounds). I answered by mentioning something I remembered from the PPT—that Oracle has a presence in almost 125 countries—so she could see that I had paid attention.

Next, she gave me a very simple coding question: adding two numbers. She wanted to understand how I wrote the code. As a follow-up, she asked about function declaration vs. function expression. After that, she asked me to write an SQL query to select all names starting with my name using the like operator. Then, we moved on to HR-style questions. She asked me about my strengths and weaknesses, and then asked: If you had all the resources you needed, what product would you build using your skills?

I also got some puzzles. For example: If I had 1 cm³ cubes, how many would I need to fill a 9 cm³ cube?

She asked me CSS questions too. One was whether I had used a CSS framework (I said I had worked with Tailwind CSS). Then she asked about the main box styles in CSS. At first, I misunderstood and said flex, grid, etc., but what she was looking for was padding, borders, margins, etc. She also asked: What is absolute positioning? (and wanted me to show it by drawing) and What is the default positioning?

Another puzzle was the classic jug problem: You have a 5L jug and a 3L jug. How will you measure exactly 4L without any measuring device?

She also touched on OOP and C++ concepts, like polymorphism (and asked me to write it down), what I would call an overloaded constructor in the parent class, the difference between agentic AI and generative AI, and what inline functions in C++ are. At the end, she asked if I had any questions, and I asked her two.

Now, here's the important part: I did **not** know the answers to all the questions, and I wasn't able to solve both the puzzles. But I made sure to walk her through my thought process and explain the solutions I was considering. I also asked for hints when I needed them. It's not about always having the correct answer—it's about how you approach the problem and how you carry yourself throughout the process. Don't be scared. You'll feel very nervous outside, but once you're inside, just sit and talk as if you're chatting with a friend. And remember: it's okay if you don't know something. Nobody knows everything. What matters most is keeping an open mind and thinking freely.

2. Technical Round 2 [Duration : 30 mins]

For Tech Round 2, I was called in within 20 minutes. The interviewer was very chill and said he wouldn't start with technical questions. Instead, he began by asking me where I live and Why Oracle. While I was answering, he noticed I mentioned AI and became very interested. Since I had completed an internship in generative AI, he asked me to explain it and draw the flow. This was a project I knew well, so I explained everything in detail. While I was drawing, he mentioned that he used to live where I do, and we had a short discussion about that.

After that, he asked a simple DSA question: detect duplicates and print their count. Then he asked me to write an SQL query to find the third-highest rank in a given dataset, and later to implement the same logic in C++.

He asked me Why Oracle once again, and I repeated the point I had mentioned earlier from the PPT. At the end, he asked if I had any questions, so I asked a few, and we discussed them.

3. HR round[10mins and 9 ppl]

This was NOT an elimination round, just a formality round. I was asked about my nationality, willingness to relocate, plans for a master's degree, who I live with, and my hobbies. She also mentioned that the final results would be based on Round 1 and Round 2. Finally, she asked if I had any questions.

Useful Tips:

So here's a short gist of my college years. Honestly, I didn't have a great start—my PTR was 7.35 (currently it's 8.25, keep it above 8), and it's not like I was busy with DSA or projects. In fact, the first two years I was pretty lost and didn't do much prep at all. Later, I finally buckled down and started DSA. I tried covering as much as I could before placements, but still couldn't clear the OAs. I sat for around 15 to 20 companies and got rejected in all of them. By the end, I was the only one in my group still unplaced.

I'm telling you this because the process can get really tough. Maybe everyone around you will get placed before you, maybe your PTR won't meet the cutoffs, and yeah—there'll be a lot of tough days. But don't give up. Enjoy the whole ride—the rejections and the successes—because that's what makes it easier to handle.

And the most important thing: **have fun!** It's college—you won't get this time again. And also everyone has a different approach to studying, if u have a different one don't think it's wrong.

DOCUMENTS I REFERRED :

Java in OOPs is important as much as dsa is so cover that. And as much as DSA is hyped, focus on java & sql too.

DSA : [Strivers sheet](#)

JAVA : [Kunal Khushwaha](#)

SQL : leetcode top 50

APTITUDE : indiabix and [Youtube](#)

GOOD LUCK !!!
