

Company: TransBnk

Job Profile: Software Developer (SDE)

Offer Type: Internship + Placement

Internship Stipend: 20k

CTC: 8 LPA

Location: Vikhroli, Mumbai

Process Date: 10 Sept 2025

Placement Process:

1. Resume Shortlisting
2. Pre-Placement Talk
3. Technical Interview
4. HR Interview

1. Resume Shortlisting [Everybody above 6 CGPA applied]

Applications opened on Superset on 1st September with a minimum eligibility criteria of 6 CGPA. However, during the shortlisting stage, only students with 7.5 CGPA and above were considered. Resume shortlisting was done based on keywords in the resume, required skills, or possibly relevant internships and projects. After this round, 13 students were shortlisted, and the list was announced on 8th September.

Pre-Placement Talk -

The PPT was conducted just before the interviews on 10th September by TransBnk's CTO and HR. They explained about the company—how they started, what motivated them, their current situation, and the type of candidates they were looking for. They also gave us an overview of the company's complete workflow.

I am specifically mentioning this round because attending PPTs and interacting with the presenters can really help during interviews. This worked for me too—I asked a few questions during the PPT based on the homework I had done about the company beforehand. This showed my genuine interest, and they answered my questions in detail. Then we were introduced to the two panelists who would conduct the technical interviews—both were senior developers at the company.

2. Technical Interview [13 students appeared]

The first panelist started the interview by asking me for my introduction. He then went into detail about my internships and asked me to explain my projects. I explained all my projects thoroughly. After that, he went through the skills section of my resume and asked whether I had learned those skills through my college curriculum. I clarified that I had self-studied most of them.

He then noticed the extracurricular skills mentioned in my resume and seemed curious, so we had a short discussion about them for about a minute. After this, he began asking technical questions based on my resume and projects. He asked me about **JWT**, its working, and format, which I explained in detail. He also asked the difference between **JWT and Session**, along with some follow-up questions. Later, he moved on to questions about **Java**, including **multithreading, its types, and working**. Since one of my projects involved AWS, he asked me to explain **AWS, its services, use cases, and overall working**. Finally, he said, *“That’s all from my side,”* and handed it over to the second panelist.

The second panelist gave me a problem on paper: [Missing and Repeating Number](#) I directly explained my optimal approach based on equations and then wrote pseudo code on paper. He was satisfied with my explanation.

Next, he gave me a slightly tricky problem: “How would you sort a file containing numbers of size 8GB when you only have 6GB RAM?” He asked me to sit in another cabin and solve it while he interviewed the next candidate. I wrote down multiple approaches (not code, just logic) and then went back to explain them. My approaches included swap memory, virtual memory, and an external merge sort-based approach. They seemed satisfied with my answers.

This round lasted for about 25–30 minutes.

3. **HR Interview** [6 students appeared]

After almost 2 hours of waiting and the lunch break, I was called for the HR interview. There was one panelist, the same person who had presented the PPT and was the HR representative of the company.

The interview began with my introduction, followed by an overview of my projects and internships. He then asked about my internships in detail. The discussion moved on to my interests, future goals, 5-year and 10-year plans, and whether I had any plans for pursuing a master’s degree. I explained my reasons clearly.

He then grilled me for a while on one question: *“Would you start your own venture if you had the right resources and people?”* After that, he asked why I chose engineering and why I pursued a diploma instead of HSC. He also asked me to share something that wasn’t mentioned on my resume.

Towards the end, he said, *“That’s all from my side,”* and asked if I had any questions. I asked him a couple of questions about the company, which he answered in detail. I also gave some inputs in between, showing that I had done my homework about the company. He even recalled the question I had asked during the PPT. The interview concluded after about 20 minutes.

The results were announced after all interviews were completed. They played a small prank on us by calling **four** of us into a cabin and saying they had only three vacancies, asking who would back off. After a tense moment, they revealed they were just kidding and **offered jobs to all four of us.** 🙌

Useful Tips:

- Showcase your skills on your resume and know your resume inside out. Design your resume on latex, use this template - [Jake's Resume](#) Here's my resume for Reference - [Mohit-Tech-Resume](#)
- Maintain Good cgpa, this was one of the issues i faced a lot during placement season as i was not able to apply for around 6 companies due to low cgpa. Later when cgpa was updated after 6th sem, i was able to sit for all further companies. 8+ cgpa is completely safe but 7.5 will also allow you to sit for 90% of the companies.
- Practice DSA way before placement starts and when placements come close, you can focus on your revision more rather than learning new skills.
- Be strong at CS-Core fundamentals and build projects which make some impact, it will surely impress interviewers.
- Don't forget to attend PPTs of companies which you apply, it helps a lott to know about the company and also if you interact with presenters, they will surely remember your face during the interview.
- Practice Guestimates ,Puzzles and Aptitude Questions beforehand.
 - Aptitude - IndiaBix and [CarrerRide](#)
 - Guestimate Playlist - [Most Asked Guestimates](#)
 - Puzzles Playlist - [Most Asked Puzzles](#)
- Prepare common HR questions in advance. I had created a sheet of possible questions with my own answers, which helped me a lot. I also requested my already-placed friends to conduct mock interviews—this gave me valuable feedback and helped me self-reflect and improve.

Most Important Tip -

Have Patience During Placements, If you have worked hard on your skills, you will surely get selected. Placements also involve a great deal of luck. For instance, this was my 21st application, and before this, I had already missed six opportunities due to a low CGPA. This was also my 5th interview.

So, my advice is: **keep working hard, stay brave, and never lose hope.** One day, the right company will come looking for you—when the stars finally align. Yes, you'll need a bit of luck, but always remember: **luck favours the brave.** ✨

All the Best!
