

Company: TransBnk

Job Profile: Software Developer

Offer Type: [Internship + Placement]

Internship Stipend: ₹20,000

CTC:8 LPA

Location: Vikhroli,Mumbai

Process Date: 10/9/25

Placement Process:

1. Resume Shortlisting
2. Pre Placement Talk
3. Technical Interview
4. HR Interview

1. Resume Shortlisting [Everyone above 6 CGPA applied]

Applications opened on Superset on 1st September with a minimum eligibility criterion of 6 CGPA. However, during shortlisting, only students with 7.5 CGPA and above were considered. Shortlisting was done based on keywords in the resume, required skills, and relevant internships or projects. A total of 18 students were shortlisted, and the list was announced on 8th September.

Pre-Placement Talk -

The PPT was conducted just before the interviews on 10th September by TransBnk's CTO and HR. They explained about the company—how they started, what motivated them, their current status, and the kind of candidates they were looking for. I carefully noted down key points from the presentation that later came up in my technical interview. I made sure to connect what the presenters shared with the homework I had done about the company. This gave me clarity and confidence when interacting with the interviewers.

2. Technical Interview [18 candidates appeared for this round]

The first round was taken by a panel consisting of two interviewers and lasted around 45 minutes to 1 hour. It began with a simple "Introduce yourself," after which they focused on my projects. They asked me to explain the workflow of my projects in detail. After discussing the projects, the interviewers shifted their attention to my technical skills and asked questions on RabbitMQ, OOP concepts, whether Java is single-threaded or multi-threaded, the difference between method overloading and method overriding, and the difference between SQL and NoSQL databases. They also asked about the internship I had done and

what work I had completed during it. At one point, they asked *why I chose the SDE profile when my course is AIML*.

They also asked questions on Spring Boot and React hooks. On the DSA side, I was given a coding problem to solve live on their laptop, which was the LeetCode problem [Set Matrix Zeroes](#).

Tips & Takeaways:

For project-related discussions, it's really helpful to use the **STAR method**—first explain the situation your project was solving, then your role or task, the actions you took (technologies, code, concepts used), and finally the result or outcome. Make sure to be thorough with **your resume and the skills you have mentioned**, because interviewers often dive deep into whatever is listed. When discussing projects, including **details about the code and how it works** can make your explanation more clear and convincing.

3. **HR Interview** [6 candidates appeared for this round]

The HR round began with a simple “Introduce yourself” question. After that, he asked me to explain my projects, but not in too much detail—just enough to understand my role and the technologies I worked with. He also asked about my strengths and weaknesses to get a sense of my personal and professional qualities. One of the key questions was why I chose to start my career at TransBnk instead of joining a bigger MNC. Towards the end of the round, he asked if I had any questions, and I asked, “*How does TransBnk support fresh graduates in their career growth and learning?*” This showed my interest in learning and developing within the company. The HR round lasted around 15 to 20 minutes and mainly focused on understanding my personality, motivation, and alignment with the company culture.

Tips & Takeaways:

- Be well-prepared with common HR questions, as most companies ask similar questions.
- Always ask a question at the end of the interview—it shows that you are genuinely interested in learning more about the company and its culture.
- Be confident while answering; do not appear hesitant or unsure.
- Maintain a positive attitude and always have a smile on your face throughout the interview.

4. **Prank Round** [4 candidates appeared for this round]

After the HR round, there was a funny prank round. They called four people and said that only three seats were available, so someone would have to back out. Naturally, it created a little tension, but then they revealed that it was a prank and that all of us were actually selected for TransBnk. It was a light-hearted way to end the process and made the announcement memorable.

4 students were offered the job and I am one of them.

Useful Tips:

1. Aptitude Preparation:

- **Don't take aptitude lightly.** I initially thought only a few companies would ask for it, but almost every company includes aptitude in their selection process.
- In some of the companies, I was able to solve the coding questions, but I couldn't solve the aptitude questions correctly, so I wasn't shortlisted for the next round.
- Start preparing at least **one month before placements** to build confidence and speed.
- **Resources for Aptitude:** [IndiaBix](#) & [FreshCareers](#)
- **Tricks and Shortcuts for Aptitude:** [Imran Sir Maths](#) & [Last Moment Tutions](#)

2. DSA Preparation:

● Follow Resources:

- **Striver DSA Sheet (A to Z)** – Covers all important DSA topics systematically. [Striver's A2Z DSA Sheet](#)
- **Aditya Verma's YouTube Channel:** Offers detailed explanations and tutorials on various DSA concepts. [Aditya Verma](#)

● Daily Practice:

- Solve problems on **LeetCode** daily. Starting just one month before placements is usually not enough. Regular practice builds speed, accuracy, and problem-solving intuition.

● Contests and Challenges:

- Participate in **daily/weekly coding contests**. This helps improve problem-solving under time pressure and exposes you to a variety of question types.

3. SQL / Database Preparation:

- **Practice Queries:** Solve at least [50 SQL problems on LeetCode](#) covering different concepts like SELECT, JOIN, GROUP BY, HAVING, ORDER BY, subqueries, and aggregation functions.
- **Understand Concepts:** Be clear about **SQL vs NoSQL**, normalization, relationships, and indexing.
- **Practical Application:** Try to write queries on sample databases to understand how tables relate and how data can be extracted efficiently.
- **Understand ER Diagram to SQL Conversion.**
- **Resources:** [GeeksforGeeks: Mapping from ER Model to Relational Model](#) & [CodeChef: ER Diagrams to Tables Practice Problems](#)

- **DBMS One shot:** [DBMS Concept](#) (For Concept Revision)

4. **Javascript:** [Javascript](#)
5. **Java:** [Complete Java Programming Course](#)
6. **Output Guess Questions:** [Geeks for Geeks](#)
7. **Communication Skills / Soft Skills**

Clarity and Confidence:

Speak clearly and confidently during interviews. Avoid filler words and maintain a steady pace.

Think Aloud:

- While solving coding or technical problems, **explain your thought process aloud**.
- This helps the interviewer understand your approach, reasoning, and problem-solving skills, even if the final answer isn't correct.

Active Listening:

Pay attention to the interviewer's questions and respond accordingly. Don't interrupt; it shows respect and good listening skills.

8. **Believe in God's Plan / Stay Positive:**

- Trust that everything happens for a reason. Stay calm and positive throughout the preparation and interview process.
- A strong mindset and faith can help you stay motivated even during challenges or setbacks.

BEST OF LUCKKK!!
