2. Quantitative Aptitude : Easy questions 12 to be solved in 12 minutes
3. Coding Section : 2 coding questions on their given IDE easy level questions 50 minutes were given
4. Verbal Section : 12 verbal ability questions to be solved in 14 minutes

2. Technical Round 1 [30 students appeared in this round]

I was the first person appearing for the round as per the schedule .

In the technical round, each panel consisted of two interviewers. In my panel, both were senior-level employees of the firm. The interview began with questions on Object-Oriented Programming (OOPs), where I was asked to explain the four pillars of OOPs and provide two examples for each pillar.

After that, the discussion moved to my projects, where they asked in-depth questions about the tech stack I used, the challenges I faced, and the overall impact of the projects. They also asked me to explain the differences between Machine Learning (ML), Artificial Intelligence (AI), and Deep Learning (DL)

He asked to Solve balanced parenthesis Question on Paper and Fibonacci series recursively as well as Iteratively .

Next, the focus shifted to databases. I was asked about MongoDB and SQL, the types of relationships in SQL, and to provide examples for the same. They also gave me a sample database scenario and asked me to write queries involving GROUP BY and JOIN operations.

They further discussed my internships and prior experience, asking me to explain my role, responsibilities, and the technologies I worked with.

Towards the end, the interview concluded with a couple of puzzles and some basic questions about TransUnion—its functions, role in the industry, and what the company is all about.

3. **HR round** [10 Students appeared in this round]

In this round, the HR and the Operations Head conducted the interview. They began by asking me what I understood from the company's PPT presentation and how I perceived the company's functioning. I was also asked whether I would be comfortable if the company assigned me to roles other than Software Engineering (SWE).

The discussion then moved to my passion project and the extracurricular activities I pursued during my time at SPIT. They also inquired about my family background and past education, along with the hackathons I had participated in.

Towards the end, they asked me about my location preferences and concluded the interview by explaining the onboarding process and what to expect after joining.

After the HR Round 8 students were finally Selected .

Useful Tips:

1. **Be Confident with DSA & SQL** : These are the backbone of most technical interviews. Revise key concepts, patterns, and practice problem-solving regularly.
2. **Know Your Resume Inside-Out** : Be absolutely clear about every project, internship, and skill mentioned. Don't lie or exaggerate—be real and authentic.
3. **Present Yourself Confidently** : Communication matters as much as technical knowledge. Speak clearly, structure your answers, and show enthusiasm.
4. **Be Mentally Ready for Rejections** : Rejections are part of the journey. Before this interview, I had already faced **3 HR round rejections**. Each rejection is just redirection—learn from it and keep moving forward.
5. **Keep Applying & Keep Fighting** : Consistency is the key. Don't let one rejection stop you from trying for the next opportunity.
6. **Know the Company** : Read about the company's services, products, and culture. A few lines showing genuine interest can create a positive impression.
7. **Stay Calm in Puzzles & HR Questions** : HR and puzzles are often about testing your attitude, logical thinking, and composure—don't rush, just stay logical and calm.
