

[Varsha Bojja]

[Comps]

Company: TransUnion

Job Profile: Quality/Developer

Offer Type: [Internship + Placement]

Internship Stipend: 25000

CTC: 8lakh CTC + 1lakh joining bonus

Location: Pune(Internship)/Chennai/Bangalore/Hyderabad

Process Date: 4th-5th September

Placement Process

TransUnion Eligibility Criteria: 7 CGPA

The selection process consisted of the following rounds:

1. **Online Assessment** (*87 students appeared*)

The round consisted of 4 sections:

- **Logical Aptitude:** Easy to medium level, 14 questions in 14 minutes
- **Quantitative Aptitude:** Easy, 12 questions in 12 minutes
- **Coding Section:** 2 coding questions on their IDE, easy level, 50 minutes [*I don't recall the exact question, but it was a simple coding problem with basic logic that could be understood from the test cases. (Questions was different for everyone)*]
- **Verbal Section:** 12 questions in 14 minutes

2. **Technical Round 1** (*30 students appeared*)

- Tell me about yourself.
- What are the ACID properties?
- What is polymorphism? Explain with a real-life example, code, difference between compile-time and runtime polymorphism, and internal working.
- Write a program to check if a number is prime and explain the logic.
- Explain a project you worked on. Why did you choose that tech stack over others?
- Write an SQL query to find the average salary of departments with more than 5 employees.
- Do you have any questions? (*I asked for feedback on my performance and about the interviewer's experience working at TransUnion.*)

3. HR Round (10 students appeared)

- Tell me about yourself.
- Why do you want to join TransUnion? (*Answered by aligning with company's core values.*)
- What difficulties have you faced during your engineering life, and how did you overcome them?
- Where do you see yourself in 5 years?
- How do you plan to keep yourself updated with the latest technologies?
- Explain one of your projects.
- Why did you choose this project?
- Do you have any questions for us? (*Same as above.*)

After the HR round, **8 students were finally selected.**

Useful Tips

- **DSA:** Easy to medium level is enough for moderate companies. Companies like **PhonePe** may ask **graphs, trees, DP, and advanced problems**.
- **SQL:** Asked in almost every interview — know all **commands, query execution, differences, and internal workings**.
 - In SQL editors, you can test and debug queries, but in interviews, you won't have that. **Practice writing queries on pen and paper** and predicting outputs carefully.
- **Communication:** It's not just about what you know, but **how you answer**. Maintain **eye contact**, stay **confident**, and avoid **pauses or stammering**.
- **OOPs:** Prepare **in detail** with **real-life examples** and references to your **projects/code**.
- **Core Subjects:** Basics of **OS, DBMS, and Computer Networks** are usually sufficient.
- **System Design:** Asked only in specific companies like **IDFC**, not everywhere.
- **Projects:**
 - Know your projects **thoroughly** — tech stack, challenges faced, standout features, and future improvements.
 - Be ready to explain **why you chose the project** and **why that tech stack**.
- **HR Questions & Puzzles:** Prepare **basic HR questions** (strengths, weaknesses, goals) and practice **puzzles** from GeeksforGeeks (GFG).
