

Company: UBS

Job Profile: GOTO Intern

Offer Type: Internship only

Internship Stipend: 60k

Location: Pune

Process Date: 14-07-2025

Placement Process:

Placement Process:

1. Online Assessment (OA)

2. Technical Interview Round

3. HR Interview Round

1. Round 1: Online Assessment [197 students] (11/07/2025)

Eligibility: Minimum CGPA of 7.0+

UBS had come to campus in the month of march for selection of students for campus hackathon. For the hackathon they had conducted an online assessment. The shortlisted candidates for campus hackathon were directly eligible for interviews. I was one of them.

The assessment was largely the same for both hackathon and placement selections. It included technical MCQs focused on Computer Science fundamentals such as Data Structures & Algorithms, DBMS, and OOPs. There were also questions on error identification, output prediction, and one coding question based on DSA. The coding problem was of moderate difficulty, and I successfully passed all the test cases.

A total of 10 were shortlisted. 2 from Second year and 8 from Third year. The hackathon was a really great opportunity for getting to know the work culture at UBS and also connecting with the mentors.

For such rounds I recommend to

- Practice aptitude and DSA problems regularly.
- Be comfortable with Java syntax and core concepts of OOP.
- Brush up on CS fundamentals like DBMS, OS, and basic algorithms.
- Focus on accuracy and efficiency during coding questions.

2. [Technical Interview] [16 students] (14-07-2025)

There were a total of 16 candidates selected for this round. (15 through OA and 1 hackathon participant).

We were asked to report to campus at 9 am. The interviews started at around 10 am. There were 6 panels for the candidates, and the interviews for Summer interns and placements were held together. They began with placement candidates.

They first asked me to introduce myself and to mention all the core subjects that i had till now. I mentioned the Minor course in Banking technology and they seemed interested in it. And he asked me to explain what the course contained and a discussion for 3-5 minutes. Next they moved on to core subjects, asking some questions on OS and some questions on DSA.

Then he asked me about my work in the internships and this conversation lasted for 7 - 10 minutes. He asked what exactly the work was about and he asked some in-depth questions regarding different specific implementations. They asked me about my interest in Computer Engineering and why this specific field. I was asked a question about implementation of a monopoly board game in abstract terms, the classes and data structures used. There were few questions on my implementation, I was able to answer all, except one. I was not sure about the question but I mentioned my answer and said that I would be able to append to my answer if I could actually get into implementing it or drafting it.

Tips:

- You should know your resume completely, why and where a particular tool, framework or language was used. What was your role in the projects, What is it about and the concepts used in the project.
- For OOPS : java docs and any book about OOP language that covers from the fundamentals (eg. Java programming from the ground up)
- For Data Structures : college syllabus is sufficient but Being well versed with implementations may be helpful.
- For Algorithms : The problems are doable. Having some consistency is important. You should atleast go through your implementation or the thinking with them, if a direct complete solution does not come to the mind, sometimes even they nudge you into the right direction.
- For DBMS : The questions aren't difficult and online resources are enough for it.

3. **HR Round** [9 students] (14-07-2025)

This was not like a formal round but more as a casual conversation. It lasted about 10 minutes. They asked some basic questions about my hobbies, how I would describe myself. And then they asked me about my hackathon experience and to describe the environment over at the campus. Then they asked some questions about my internship experience. And that was basically it.

The only thing I could say about the HR round is to be confident and be comfortable. Be calm.

Finally 3 students were selected for internships.

Useful Tips:

The only thing other than the ones I mentioned above is to think before you speak. You would have heard this before but that really matters. I myself am not completely adapted to this approach. Because I myself spoke too soon once and lost my train of thought. It could affect your confidence level. So be sure to be able to pick yourself back up after it even if you slip through.
