

Company: UBS

Job Profile: Graduate Trainee Technology

Offer Type: Internship + Placement

Internship Stipend: 60k

CTC: 14.5 LPA (12.5 + 2 joining)

Location: Pune/Hyderabad

Process Date: 10/07/2025 → PPT + OA

14/07/2025 → Interviews

Placement Process:

There were 3 rounds, one online assessment and two interview rounds. The people who were shortlisted for the UBS Campus Hackathon were directly eligible for the interviews.

1. [PPT and Online Assessment] [173 candidates appeared for this round]

There was an eligibility criteria of 7+ CGPA.

There was an online PPT, after which a test was conducted on campus. There were 30 MCQs and 1 DSA question. 30 MCQs were split into 15 Aptitude + 15 Technical questions on topics like OOPS, Programming, DBMS, etc.

As I was a UBS campus hackathon participant, I was directly eligible for the interviews and didn't need to appear for this test. The hackathon was conducted in March (4 months before the hiring process), where you needed to give an online assessment of a similar pattern. I was able to solve the DSA question fully. There were 10 candidates shortlisted for this (2 from second year and the rest of 3rd year). We had to go to the hack which was conducted in the UBS Airoli/Pune office. There were multiple colleges participating, teams were formed of 6 ppl who may/may not be from the same college. The students from Mumbai colleges had to be in the Airoli office. There were 3 problem statements which were pretty doable, and it's a nice experience so make sure you go for it. My problem statement was a Learning Management System for rural schools to connect volunteers and school students. You get to see the work culture, connect with mentors and gain valuable exposure. There were a total of 20-odd teams, and even if you didn't win the hackathon you're still eligible for a direct interview, your performance is what matters.

There were a total of 20 candidates selected after this round (14 through OA + 6 Hackathon participants)

2. [Technical Interview] [20 candidates appeared for this round]

There were 6 panels for the candidates, and the interviews for Summer interns and placements were held together. Some panels had 1 interviewer while some had 2. They asked me for my introduction, interests beside coding, my goals/aspirations at the start to get me comfortable, then asked about the projects I had done, especially a project in which I had used AI. I had told them about my GenAI experience, which I had also shown in the UBS Hackathon, so they asked me about that as well. They focussed mainly on AI, considerations in AI, how to make sure AI is safe and efficient for banks, how would you handle different responses of AI for the same request/prompt. I was comfortable with both Python and Java so they asked me which I prefer. I said I do DSA in python and development in Java, which they were satisfied with.

I was then asked about DevOps, which I just had a basic idea about, but they were very considerate and explained it to me as well. They asked me a few logical puzzles and as I had practiced such questions on GeeksForGeeks I was able to solve them. They then asked if I had any questions for them and I asked them about their experience in UBS and the work they got to do/kind of projects they built.

10 students were selected after this

Tips:

- Know your resume perfectly, and use your introduction as well as other answers to guide the interview in the direction you want.
- Make sure your answers align with the job description and try to read up more on recent technologies and their impacts on your project/the company.
- Your introduction should be detailed but not too long, cover all main points and topics like DSA, projects, hackathons, work experience, etc. Give a brief overview of the work you did, the fields you're interested in and how you've used those in your projects.
- Know your projects thoroughly, not code but the core concept, the flow. You should be able to tell the interviewer why you built a project and what problem it solves or what you learnt from it

3. [HR Round] [10 students appeared for this round]

In this round, the HR already knew me because of the hackathon so she didn't ask me many questions about UBS/why I wanted to join. She asked me about the hackathons I had participated in and how my experience was. I was then asked about my family, where I live and some general questions.

[6 students were offered the job]

Useful Tips:

- **Your fundamentals should be strong, make your DSA, OOPS and DBMS strong, it helps in a lot of tests and interviews. Practice explaining your logic and answers as well. When you answer a DSA question in the interview, you should explain it so that the interviewer knows**

which way you're thinking and is able to guide you if needed. For the technical interview, some students were asked a DSA question while some weren't, so it is better to be prepared.

- Practice Strivers Sheets for DSA problems (either A to Z or the 79 sheet). Use A to Z to learn all the concepts and the 79 sheet for harder problems + revision.
- Practice aptitude questions as well as logical puzzles as some interviews require that. Use IndiaBix for aptitude tests and GFG for logical puzzles
- Be confident and calm in the interview, it is okay if you don't know a concept, they don't expect you to know everything. But do read articles on medium/blogs/content for more knowledge so that you at least have an idea about most topics
