

Piyanshu Gehani

CSE-AIML

Company: **U.B.S.**

Job Profile: **Graduate Trainee**

Offer Type: **Internship + Placement**

Internship Stipend: **60,000 per month**

CTC: **14.5 LPA (12.5 + 2)**

Location: **Pune/Hyderabad**

Process Date: **14/07/25**

Placement Process:

1. Pre Placement Talk (Microsoft Teams): 10-07-2025 from 11.30am - 12.30pm
2. Online Assessment(Hackerrank): 10-07-2025 from 1.30pm- 3.30pm .
3. Interview Rounds (SPIT Campus): 14-07-2025

1. **Online Assessment** [Everyone who applied]

There was an OA round ofc, but for the finalists of the **UBS India Campus Hackathon**, they were **directly exempted** from the **UBS campus placement online assessment** and advanced straight to the interview round. **I was also exempted from the OA round** due to this. Participating in the hackathon not only helped us connect with amazing peers and mentors but also gave me valuable insights into real-world problem-solving and what companies like UBS look for in candidates. If you ever get such opportunities, **DO NOT MISS IT**, being a **winner** of this hackathon **gave me an edge** in every interview I faced afterward.

For those who had to take the OA, it consisted of **aptitude questions, MCQs on core CS fundamentals** (like predicting code outputs), and **one key coding problem**. The coding questions varied—some received complex ones like greedy or 3D DP, while others got easier two-pointer problems. We had an **OA round of exactly similar format during the hackathon selection process which shortlisted 11 people from the college** for the hackathon at UBS offices. **Clearing most of the test cases was critical, most shortlisted candidates passed nearly all, though a few made it with partial success too, via their good aptitude scores.** So, performance mattered, but luck had its part as well.

2. **Technical Round -1** [20 candidates were shortlisted]

We were asked to report to college by **9:00 a.m.**, with the interviews beginning around **10:30 a.m.** My panel had **2 interviewers**, one of them started with asking me about the **problem statement i was given during the hackathon, and about the solution**, I explained to him in detail about everything about the hackathon right from the start to end of the 24 hrs. Then since our solution consisted of an LLM, he asked me more about **how would you ensure that the LLM gives correct answers?** And asked **why Gemini over other LLMs?** He also inquired about **OpenAI's Whisper model in depth since that was also being used in a lot of projects of mine.** He then asked me **how would you reduce the latency of Whisper for a large audio file** to which I replied of an idea of dividing the audio file into various chunks and performing parallel processing (multithreading) on them to get the transcriptions in faster time. He was convinced about my solution.

Then the other panelist gave me a coding question on finding the longest palindromic substring -> <https://leetcode.com/problems/longest-palindromic-substring/description/>, this was a LC medium. I started with the **brute force approach** of recursively moving the 2 pointers and then **memoizing** it. She was satisfied with the approach and didn't ask for the most optimal one. After this I was asked some basic questions like **why DSA in python and not other languages?** To which my answer was clear that I had done everything from backend frameworks like Django, FastAPI to AI/ML, and had around **3+ YOE of using python**. Lastly they also gave me a situation about **how I would maintain data integrity in one of my projects.**

After this the panelists asked **if I had any questions.** I asked them about how Agentic AI is being used and in what domains are UBS planning to do so. I also asked about reasons behind why their merger faced so many issues and how UBS plans to avoid those issues.

Note: For some candidates they took multiple technical interviews, while for some they took a technical & just an HR interview only

3. **HR Round** [10-11 candidates were shortlisted]

This was **quite simple and straightforward unlike other HR interviews.** She remembered my face during the hackathon as I was involved in the final pitch as well, so she didn't ask much about HR questions, rather a **simple background check** about my family and **whether I am fine with relocation or not.**

Tip: See, HR interviews may seem simple but you need to understand and play safe here, as this is also the round where you have a lot to lose. So don't take it lightly and be well prepared with your answers. Stick with a genuine smile throughout the interviews, so even if you make a

mistake, accepting that mistake with a smile would give a much better impression than pointlessly being fixated on that point.

6 students were offered the role and I was one of them.

Useful Tips:

- 1) You won't necessarily face the same questions that your seniors or peers did. Your interview will mostly be based on your resume and your college journey. So it's okay if you feel you don't know the answer to a question that was asked to someone else. Just accept it you don't know with a smile rather than justifying it.
- 2) Prepare well for the OAs as these have the major eliminations. CP is recommended since competition is growing now, but you need to understand one thing, doing only CP/DSA is not enough, you need to have decent projects that you can speak hours on with the interviewer.
- 3) Have a balance on everything, with little more focus to DSA since every OA involves this as the deciding factor. Give contests every week atleast twice. LC Contests are recommended more than any other.
- 4) If you fail to clear OAs constantly, don't beat yourself up and keep preparing well for the up-coming opportunities. Because its not your fault, sometimes the competition is too much as well.
- 5) Lastly, **DO NOT miss** such opportunities like company hackathons, sometimes they're incredibly useful and can make a **big difference** during placements.
