

Company: UBS

Job Profile: Graduate Trainee

Offer Type: Internship + Placement

Internship Stipend: 60k

CTC: 12.5 (+ 2) LPA

Location: Pune / Hyderabad

Process Date: 14/7/25

Placement Process:

- UBS Hackathon was conducted in April, Students participating in the hackathon were directly shortlisted for the Tech interviews.
- OA offline at college was the shortlisting criteria for the rest of the students.
- PPT was conducted a day before the OA.
- 14 people were shortlisted from the OA + 6 from the UBS hack.
- 1 tech interview was conducted for some people, whereas for some, there were 2 tech interviews.
- Eligibility criteria was above 70% in both 10th and 12th boards, CGPA : 7+.

1. Online Assessment [173 people appeared]

There were 2 tests focusing on aptitude (verbal and visual reasoning) and UBS cultural assessment, which everyone had to take (from home).

Then a hackerank test was conducted focusing on DSA and CS core which was skipped for hack participants.

2. Tech Interview [20 people] (25-30 minutes)

(6 panels with 2 interviewers in some and 1 in some, Summer intern process was going on alongside as well)

It started with my introduction, then they asked me about one of my projects. I explained it in detail, including the tech stack used (what and why) and system design.

Then they asked me what changes I would make in the project.

Then some HR questions like :

1. If your friend is suggesting some other technology and you want to use something else, then what will you do?
2. If one of your team member is not giving his best, which is causing delays in deliverables, what will you do?
3. If a client has requested for some feature which does not align with the objectives of your project, what will you do?
4. What are the business opportunities of your hackathon project (which was made at UBS hack) ?

Then 2 puzzles:

1. A variation of this ([Hats puzzle](#)),The conditions were not specified properly or I did not understand them properly. (I wasn't able to solve it, I thought this might cost me the opportunity)
2. Simple jug problem

Then about Inner,Left,Right and Outer join.

Then they asked me about any questions I had for them. (Ask something relevant, either about their tech-stack, you can do some research beforehand.) I asked about their DevCloud project which was mentioned on GitLab.

[

Tips: Maintain eye contact with the interviewer, a smile would be helpful. Ask for hints if required. Be well versed with your resume (projects and internship if any). If you're explaining your project try doing it with a use case, it would show that it actually solves some problem.

Think before answering any questions as there will be follow up questions as well. Be ready for some HR questions as well; they can be asked in tech interviews as well. Answer HR questions carefully keeping the company's interests in mind.

]

3. **HR Round** [9-10 people appeared]

This round was just for 5 minutes, HR knew me from the hackathon so it helped. This round was chill, Questions:

1. Family background
2. Relocation
3. Other companies which conduct hackathons (Barclays specifically) and their procedure.

[6 students got the offer including me]

Useful Tips:

1. Start preparing beforehand, like start making your projects before the end of 6th semester, though it's never too late.
2. Hackathon projects are good but you should have one unique project as well.
3. Try using technologies which are used in big techs.
4. For DSA, I did leetcode and codeforces. Gave contests regularly for getting used to the time pressure.
5. CS core is important as well, DBMS and OOPS are the most important ones (some people were asked about OS as well, so be ready)
 - 5.1. For DBMS you can watch Love-Babbar's playlist.
 - 5.2. For OOPS and JAVA, Kunal Khushwaha's playlist is best.
6. To practice SQL, you can use leetcode top-50 sql, it's enough I guess.
7. System design, I did not do specifically but atleast know a bit about this as well (specially about your projects).
8. Participate in such hackathons, Companies like UBS, HERE, Nomura and Barclays conduct such hackathons, it increases your chances of getting the opportunity significantly.

Also these hackathons are a good learning experience as you get mentored by industry experts and get networking opportunities.
9. Give mock interviews for both tech and HR rounds.
